Mean Est. = Mean of the estimated coefficients across simulations; Emp. SD = Empirical SD across simulations; Cov. = Estimated coverage of 95% confidence interval.

Webtable 12. Summary of estimated log odds ratios from 100 simulated datasets, each containing 20,000 individuals. The outcome is **binary**, with **no** X-Z interaction.

Mean Est. = Mean of the estimated coefficients across simulations; Emp. SD = Empirical SD across simulations; Cov. = Estimated coverage of 95% confidence interval.

WebFigure 1: Results from 1,000 simulated datasets, each containing 2,000 individuals. The outcome is **continuous**, with a **small** X-Z interaction. The graph shows the mean (5th-95th percentiles) of the estimated coefficients across simulations with the true value indicated by the red vertical line. The estimated coverage of the 95% confidence interval is shown in parentheses.

Webfigure 2: Results from 1,000 simulated datasets, each containing 2,000 individuals. The outcome is **binary**, with a **small** X-Z interaction. The graph shows the mean (5th-95th percentiles) of the estimated coefficients across simulations with the true value indicated by the red vertical line. The estimated coverage of the 95% confidence interval is shown in parentheses.

Webfigure 3: Results from 1,000 simulated datasets, each containing 2,000 individuals. The outcome is **binary**, with **no** X-Z interaction. The graph shows the mean (5th-95th percentiles) of the estimated coefficients across simulations with the true value indicated by the red vertical line. The estimated coverage of the 95% confidence interval is shown in parentheses.
