Error in Figure

In the original publication [1], there was a mistake in Figure 2. This presents smoothing line charts with changes in LDL-c, total cholesterol, and statin treatment across age in subjects on primary prevention (A) and secondary prevention (B) by gender (LDL-c, low-density lipoprotein cholesterol) as published. The mistake was that primary prevention (A) and secondary prevention (B) erroneously show the same chart. The corrected Figure 2 is as follows: Smoothing line charts with changes in LDL-c, total cholesterol, and statin treatment across age in subjects on primary prevention (A) and secondary prevention (B) by gender (LDL-c, low-density lipoprotein cholesterol). This is shown below.
