The Fanconi anemia pathway sensitizes to DNA alkylating agents by inducing JNK-p53-dependent mitochondrial apoptosis in breast cancer cells

LIN ZHAO, YANLIN LI, MIAO HE, ZHIGUO SONG, SHU LIN, ZHAOJIN YU, XUEFENG BAI, ENHUA WANG and MINJIE WEI

Int J Oncol 45: 129-138, 2014; DOI: 10.3892/ijo.2014.2400

Following the publication of the above paper, a concerned reader drew to the Editor's attention that one of the fluorescence microscopic images featured in Fig. 4A had previously appeared in a different form (a portion of data in a different orientation) in another article published by the same authors [Yu J, Zhao L, Li Y, Li N, He M, Bai H, Yu Z, Zheng Z, Mi X, Wang E and We M: Silencing of Fanconi anemia complementation group F exhibits potent chemosensitization of mitomycin C activity in breast cancer cells. *J Breast Cancer* 16: 291-299, 2013]. Furthermore, the data panel shown for the 'MDA-MB-231/untreated' experiment in Fig. 4A in the above paper appeared to be duplicated as the 'MDA-MB-231/MMC + control shRNA' experiment, albeit stained differently.

After having received a request from the authors to publish a corrigendum in view of the errors identified in Fig. 4 of the above paper, the Editor of *International Journal of Oncology* has conducted an independent investigation of the matter and determined that this article should be retracted from the Journal on account of a lack of confidence in the presented data. Upon receiving this decision, the authors were not in agreement that the paper should be retracted. The Editor regrets any inconvenience that has been caused to the readership of the Journal.
