## Supplementary material

"This supplementary material is hosted by Eurosurveillance as supporting information alongside the article [One Health surveillance of West Nile and Usutu viruses: a repeated cross-sectional study exploring seroprevalence and endemicity in Southern France, 2016 to 2020], on behalf of the authors, who remain responsible for the accuracy and appropriateness of the content. The same standards for ethics, copyright, attributions and permissions as for the article apply. Supplements are not edited by Eurosurveillance and the journal is not responsible for the maintenance of any links or email addresses provided therein."

**Supplemental Figure 1.** Temporal dynamics of the infection rate of Usutu virus in Culex pipiens females.

Maximum likelihood estimates of infection rates (proportion of infected females per 100 females). Estimates were obtained by pooling data from all sites for a given year.

## **Supplemental Table 1.**

Mosquito collection sites in the Camargue area between 2018 to 2020.

All sites were not sampled all years. Thus, a "YES" on a given year indicates sampling in that site and year. Data on the sites from our previous study in 2015 are provided for the sake of completeness. Sites with WNV-positive pools are shown in blue. Sites with USUV-positive pools are shown in yellow. Figures between brackets stand for number of pools yielding a virus sequence among positive pools for a given virus.
