## Index

Figure S1. CZTS nanoparticles images acquired with SEM (a) and TEM (b).

**Figure S2**. Extracted ion chromatogram for DCF (black trace) and TP1, TP2, TP3, TP4, and TP5 (color traces) formed in the UV-Vis photolysis experiments. The chromatographic peak of each TP was selected at the degradation time of its maximum intensity. All the peak intensities are min-max scaled.

Figure S3. Evolution profile of DCF and the TPs identified in UV-Vis photolysis experiments.

Figure S4. Evolution profile of DCF and TPs identified in the UV-Vis photocatalysis experiments.

**Figure S5**. Extracted ion chromatogram for DCF (black trace) and TPs (color traces) formed in the Vis photocatalysis experiments. The chromatographic peak of each TP was selected at the degradation time of its maximum intensity. All the peak intensities are min-max scaled.
