

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

Fig. 1

We present the case of a 73-year-old man with a history of high blood pressure who was admitted to the ICU-A for bilateral COVID-19 pneumonia. He presented daily anemia despite the transfusion of blood products. He was being treated with low-molecular-weight heparin at anticoagulant doses. The abdominopelvic CT scan showed an increase in size and heterogeneity of the density of the left iliac psoas related with a hematoma, as well as a smaller one in the contralateral psoas (Fig. 1).
