B_{max} (fmol/mg) sites of ³H-JHU11761 (CSF1R) in frozen sections. GM, grey matter; WM, white matter.

ND=not detected. CVD = microvascular ischemic disease. AA = amyloid angiopathy. Lewy pathology = brainstem, limbic, or neocortical. ADNC = Alzheimer's disease related change (very low, low, moderate, high). PMI = Post Mortem Interval.

F values for ANOVA comparing regional [^{11}C]CPPC V_T across healthy controls (HC), PD patients with mean

MDS-UPDRS part II below median (Mild PD), and PD patients with mean MDS-UPDRS part II at median or

above (Moderate PD), all with Hoehn & Yahr stage ≤ 2 . T values for pair-wise post hoc tests between groups with Tukey's test. * $p < 0.05$ (uncorrected). ** $p < 0.005$ (corrected for multiple comparisons).

Supplementary table 3. Antibody identification for IHC and western blot experiments.

Target	Antibody	Source Company	Catalog Number
