#### No improvement following off-label use: case report

A 27-year-old woman exhibited no improvement during off-label therapy with colchicine, and unspecified antibacterials, corticosteroids and low-molecular-weight heparins for COVID-19. The woman tested positive for SARS-CoV-2 on real-time reverse transcriptase-PCR. Thereafter, she started receiving off-label colchicine, and unspecified antibacterials, corticosteroids and low-molecular-weight heparins [*routes and dosages not stated*], in addition to supplemental oxygen. However, she showed no improvement. Her condition subsequently worsened, and she eventually passed away [*immediate cause of death not stated*].
