Dear editor

We wish to thank Dr. Lois Crabtree for his insightful comments regarding our paper, “Lifestyle Counseling for Medication Adherence in Glaucoma”.

Current literature has shown that there is indeed a significant association between low health literacy levels and glaucoma medication adherence as referenced in our study.¹ We agree that our sample population who followed with one attending at a single academic Medical Center was skewed in terms of education as we found 70% of our population had a college education versus the reported half of the US population. However, there are other measures of health literacy besides education that were not able to be measured such as language preference, employment category, health insurance status, and income level which would further characterize a patient’s socio-economic status - a measure that highly correlates to their health literacy.^{2,3} Including these measures may have helped us find associations that have been reported previously. Unfortunately, our sample size was not large enough to run regressions with certain categories such as education and employment broken up (ie homemaker, retired, unemployed, college degree vs graduate degree) - a limitation we acknowledge in the paper that may have led us to find differing results from the current body of literature.

To address your point on printed educational materials, our team designed the materials to be reader friendly with images and at an 8th grade reading level. Our intervention also consisted of reviewing these materials with the patient prior to sending them home with it with the goal of increasing their understanding and thus adherence to the printed information.

Publish your work in this journal

Clinical Ophthalmology is an international, peer-reviewed journal covering all subspecialties within ophthalmology. Key topics include: Optometry; Visual science; Pharmacology and drug therapy in eye diseases; Basic Sciences; Primary and Secondary eye care; Patient Safety and Quality of Care Improvements. This journal is indexed on PubMed

Central and CAS, and is the official journal of The Society of Clinical Ophthalmology (SCO). The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
