

Supplementary Figure 1. TBX3 suppresses senescence and enhances proliferation. (A) Western blot for TBX3 and β-actin of HEK cells transfected with empty vector or TBX3-expressing plasmid. (B) MTS assay for TBX3-overexpressing HEK cells (n=3). (C) Representative images of SABG assay for TBX3-overexpressing HEK cells. *Scale bar*: 50μm. (D) The ratio of senescent cells in TBX3-overexpressing HEK cells assessed by SABG assay (n=3). **: $P < 0.01$.
