The Editor-in-Chief has retracted this article. Following publication, concerns were raised regarding the methodology and the conclusions of this review article. Post-publication review confirmed that while the review article appropriately describes the mechanism of action of ivermectin, the cited sources do not appear to show that there is

clear clinical evidence of the effect of ivermectin for the treatment of SARS-CoV-2. The Editor-in-Chief therefore no longer has confidence in the reliability of this review article. None of the authors agree to this retraction. The online version of this article contains the full text of the retracted article as Supplementary Information.

Supplementary Information The online version of this article (<https://doi.org/10.1038/s41429-021-00430-5>) contains supplementary material, which is available to authorized users.
