### CONSORT-EHEALTH (V 1.6.1) - Submission/Publication Form

The CONSORT-EHEALTH checklist is intended for authors of randomized trials evaluating web-based and Internet-based applications/interventions, including mobile interventions, electronic games (incl multiplayer games), social media, certain telehealth applications, and other interactive and/or networked electronic applications. Some of the items (e.g. all subitems under item 5 - description of the intervention) may also be applicable for other study designs.

The goal of the CONSORT EHEALTH checklist and guideline is to be

- a) a guide for reporting for authors of RCTs,
- b) to form a basis for appraisal of an ehealth trial (in terms of validity)

CONSORT-EHEALTH items/subitems are MANDATORY reporting items for studies published in the Journal of Medical Internet Research and other journals / scientific societies endorsing the checklist.

Items numbered 1., 2., 3., 4a., 4b etc are original CONSORT or CONSORT-NPT (non-pharmacologic treatment) items.

Items with Roman numerals (i., ii, iii, iv etc.) are CONSORT-EHEALTH extensions/clarifications.

As the CONSORT-EHEALTH checklist is still considered in a formative stage, we would ask that you also RATE ON A SCALE OF 1-5 how important/useful you feel each item is FOR THE PURPOSE OF THE CHECKLIST and reporting guideline (optional).

Mandatory reporting items are marked with a red \*.

In the textboxes, either copy & paste the relevant sections from your manuscript into this form - please include any quotes from your manuscript in QUOTATION MARKS, or answer directly by providing additional information not in the manuscript, or elaborating on why the item was not relevant for this study.

YOUR ANSWERS WILL BE PUBLISHED AS A SUPPLEMENTARY FILE TO YOUR PUBLICATION IN JMIR AND ARE CONSIDERED PART OF YOUR PUBLICATION (IF ACCEPTED).

Please fill in these questions diligently. Information will not be copyedited, so please use proper spelling and grammar, use correct capitalization, and avoid abbreviations.

DO NOT FORGET TO SAVE AS PDF \_AND\_ CLICK THE SUBMIT BUTTON SO YOUR ANSWERS ARE IN OUR DATABASE !!!

Citation Suggestion (if you append the pdf as Appendix we suggest to cite this paper in the caption):

# 1a) TITLE: Identification as a randomized trial in the title 1a) Does your paper address CONSORT item 1a? \* I.e does the title contain the phrase "Randomized Controlled Trial"? (if not, explain the reason under "other") • yes Andet:

### 1a-i) Identify the mode of delivery in the title

Identify the mode of delivery. Preferably use "web-based" and/or "mobile" and/or "electronic game" in the title. Avoid ambiguous terms like "online", "virtual", "interactive". Use "Internet-based" only if Intervention includes non-web-based Internet components (e.g. email), use "computer-based" or "electronic" only if offline products are used. Use "virtual" only in the context of "virtual reality" (3-D worlds). Use "online" only in the context of "online support groups". Complement or substitute product names with broader terms for the class of products (such as "mobile" or "smart phone" instead of "iphone"), especially if the application runs on different platforms.

Copy and paste relevant sections from manuscript title (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

From title: "Clinical Insomnia Population"

1b) ABSTRACT: Structured summary of trial design, methods, results, and conclusions

NPT extension: Description of experimental treatment, comparator, care providers, centers, and blinding status.

1b-i) Key features/functionalities/components of the intervention and comparator in the METHODS section of the ABSTRACT

Mention key features/functionalities/components of the intervention and comparator in the abstract. If possible, also mention theories and principles used for designing the site. Keep in mind the needs of systematic reviewers and indexers by including important synonyms. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

Ryd markering

Does your paper address subitem 1b-i? \*

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

From Abstract: "This randomized controlled trial included 132 adults with clinical insomnia who completed the Headspace Sleep Program (in-app, 18-session self-guided program integrating mindfulness concepts and CBT-I techniques) or waitlist control. "

Ryd markering

## 1b-ii) Level of human involvement in the METHODS section of the ABSTRACT Clarify the level of human involvement in the abstract, e.g., use phrases like "fully automated" vs. "therapist/nurse/care provider/physician-assisted" (mention number and expertise of providers involved, if any). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it) 1 2 3 4 5 subitem not at all essential

### Does your paper address subitem 1b-ii?

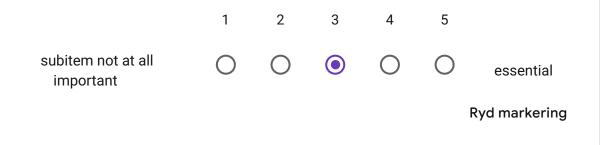

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This was not included in the Abstract

:

### 1b-iii) Open vs. closed, web-based (self-assessment) vs. face-to-face assessments in the METHODS section of the ABSTRACT

Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic or a closed online user group (closed usergroup trial), and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment). Clearly say if outcomes were self-assessed through questionnaires (as common in web-based trials). Note: In traditional offline trials, an open trial (open-label trial) is a type of clinical trial in which both the researchers and participants know which treatment is being administered. To avoid confusion, use "blinded" or "unblinded" to indicated the level of blinding instead of "open", as "open" in web-based trials usually refers to "open access" (i.e. participants can self-enrol). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

### Does your paper address subitem 1b-iii?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

From Abstract: "132 adults with clinical insomnia who completed the Headspace Sleep Program (in-app, 18-session self-guided program integrating mindfulness concepts and CBT-I techniques) or waitlist control. "

### 1b-iv) RESULTS section in abstract must contain use data

Report number of participants enrolled/assessed in each group, the use/uptake of the intervention (e.g., attrition/adherence metrics, use over time, number of logins etc.), in addition to primary/secondary outcomes. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

### Does your paper address subitem 1b-iv?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

From Abstract: "132 adults with clinical insomnia who completed the Headspace Sleep Program (in-app, 18-session self-guided program integrating mindfulness concepts and CBT-I techniques) or waitlist control. "

### 1b-v) CONCLUSIONS/DISCUSSION in abstract for negative trials

Conclusions/Discussions in abstract for negative trials: Discuss the primary outcome - if the trial is negative (primary outcome not changed), and the intervention was not used, discuss whether negative results are attributable to lack of uptake and discuss reasons. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

subitem not at all essential Ryd markering

### Does your paper address subitem 1b-v?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

From Abstract: "The Headspace Sleep Program was an effective intervention for improving sleep disturbance in adults with clinical insomnia as assessed by actigraphy and sleep diary primary outcomes."

### **INTRODUCTION**

2a) In INTRODUCTION: Scientific background and explanation of rationale

### 2a-i) Problem and the type of system/solution

Describe the problem and the type of system/solution that is object of the study: intended as stand-alone intervention vs. incorporated in broader health care program? Intended for a particular patient population? Goals of the intervention, e.g., being more cost-effective to other interventions, replace or complement other solutions? (Note: Details about the intervention are provided in "Methods" under 5)

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Headspace and other digital mental health companies 22-24 have developed therapy and mindfulness content specific to sleep disturbances, to our knowledge this is the first self-guided, app-based program that combines CBT-I techniques and mindfulness elements in a structured, sequential program. A recent meta-analysis investigating the effectiveness of app-delivered interventions for insomnia identified strong, positive effects on insomnia symptoms and sleep disturbance in apps delivering CBT-I and those delivering mindfulness interventions."

### 2b) In INTRODUCTION: Specific objectives or hypotheses

Does your paper address CONSORT subitem 2b? \*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"We hypothesized that those in the Headspace Sleep Program group would report significant improvements in insomnia outcomes and mental health outcomes compared to the waitlist control group".

### **METHODS**

:

3a) Description of trial design (such as parallel, factorial) including allocation ratio

Does your paper address CONSORT subitem 3a? \*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"This RCT using a pre-post and 3-week follow-up design examined the effectiveness of the Headspace Sleep Program on insomnia in 132 adults with clinical insomnia".

3b) Important changes to methods after trial commencement (such as eligibility criteria), with reasons

### Does your paper address CONSORT subitem 3b? \*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There were no changes to methods after trial commencement.

### 3b-i) Bug fixes, Downtimes, Content Changes

Bug fixes, Downtimes, Content Changes: ehealth systems are often dynamic systems. A description of changes to methods therefore also includes important changes made on the intervention or comparator during the trial (e.g., major bug fixes or changes in the functionality or content) (5-iii) and other "unexpected events" that may have influenced study design such as staff changes, system failures/downtimes, etc. [2].

### Does your paper address subitem 4a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Computer / Internet literacy was not assessed in the study. However, the study does include "access to a smartphone" as an inclusion criteria.

### 4a-ii) Open vs. closed, web-based vs. face-to-face assessments:

Open vs. closed, web-based vs. face-to-face assessments: Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic, and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment), i.e., to what degree got the study team to know the participant. In online-only trials, clarify if participants were quasi-anonymous and whether having multiple identities was possible or whether technical or logistical measures (e.g., cookies, email confirmation, phone calls) were used to detect/prevent these.

5-viii) Mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework

Describe mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework [6] used to design them (instructional strategy [1], behaviour change techniques, persuasive features, etc., see e.g., [7, 8] for terminology). This includes an in-depth description of the content (including where it is coming from and who developed it) [1]," whether [and how] it is tailored to individual circumstances and allows users to track their progress and receive feedback" [6]. This also includes a description of communication delivery channels and – if computer-mediated communication is a component – whether communication was synchronous or asynchronous [6]. It also includes information on presentation strategies [1], including page design principles, average amount of text on pages, presence of hyperlinks to other resources, etc. [1].

Does your paper address subitem 5-viii? \*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Participants in the Headspace Sleep Program were asked to follow the 18-session program daily while those in the waitlist control group were told to maintain their regular routines and were provided access to Headspace after the study." In addition: "Participants were given instructions for app usage and followed the program without an introductory session."

### 5-ix) Describe use parameters

Describe use parameters (e.g., intended "doses" and optimal timing for use). Clarify what instructions or recommendations were given to the user, e.g., regarding timing, frequency, heaviness of use, if any, or was the intervention used ad libitum.

subitem not at all important O O O essential

### "Insomnia Outcomes

The Insomnia Severity Index (ISI) was used to assess self-reported insomnia symptoms at screening, baseline, post-intervention, and the 3-week follow-up (range=0-28, higher scores indicate more insomnia symptoms, subgroups: moderate insomnia=15-21, severe insomnia=22-28).26 Additionally, it has been validated as a clinical endpoint for a minimally important treatment response (ISI total score reduction >7) and remission (ISI total score <8).26,27 Total scores and clinical endpoints (i.e., treatment response and remission) were assessed.

A sleep diary calculated: 1) sleep efficiency (SE, %): percentage of the sleep period spent sleeping (duration of sleep/duration of time in bed); 2) sleep onset latency (SOL, minutes): duration of the time between when the lights are turned off to sleep until falling asleep; 3) wake after sleep onset (WASO, minutes): minutes awake after initially falling asleep; and 4) total sleep time (TST, minutes): amount of sleep obtained at night.28 The sleep diary was completed every morning across a period of 7 days at 3 timepoints (baseline, postintervention, 3-weeks follow-up). For each timepoint, sleep diary data were averaged across the 7-day period with a minimum of 4 days required for inclusion. Objective sleep quality was measured using wrist actigraphy, a valid measure commonly used to assess sleep patterns.29 Sleep was measured using the ActiGraph wGT3X-BT accelerometer at a frequency of 50 Hz (ActiGraph Corporation, Pensacola, FL, USA). Participants were instructed to wear the watch on their non-dominant wrist from 2 hours before bedtime to the next morning for 7 consecutive days at the same three timepoints as the sleep diary. Identical sleep parameters were computed for actigraphy as the sleep diary (SE, SOL, WASO, and TST) and again for all three timepoints data were averaged across the 7-day period with a minimum of 4 days required for inclusion. Sleep patterns were assessed using a previously validated software algorithm based on the Cole-Kripke scoring method30 and processed with the ActiLife software (Version 6.13.5, Pensacola, CA, USA).

### Mental Health Outcomes

All mental health questionnaires were collected at baseline, post-intervention, and the 3-week follow-up. Perceived stress was assessed using the Perceived Stress Scale (PSS-10) (total score range=0-40, higher scores indicate higher perceived stress).31,32 The Patient Health Questionnaire (PHQ-8) was employed to measure depressive symptoms (total score range=0-24, higher scores indicate more depressive symptoms).33 The Generalized Anxiety Disorder (GAD-7) was completed to measure anxiety symptoms (total score range=0-21, higher scores indicate more anxiety symptoms).34 Mindfulness was assessed using the Mindful Attention Awareness Scale (MAAS) (mean of the 15 items range=1-6, higher scores indicate higher levels of trait mindfulness).35

Adherence to the Headspace Sleep Program was obtained from in-app user data for each participant. Adherence was calculated by summing the total number of completed sessions in the Headspace Sleep Program during the intervention period.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

In the initial submission we did not include this, however a reviewer pointed this out. Thus, in the revised version of the manuscript we have addressed the issue of intention-to-treat.

17a) For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval)

# Does your paper address CONSORT subitem 17a? \*

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Included where relevant in the manuscript.

# 17a-i) Presentation of process outcomes such as metrics of use and intensity of use

In addition to primary/secondary (clinical) outcomes, the presentation of process outcomes such as metrics of use and intensity of use (dose, exposure) and their operational definitions is critical. This does not only refer to metrics of attrition (13-b) (often a binary variable), but also to more continuous exposure metrics such as "average session length". These must be accompanied by a technical description how a metric like a "session" is defined (e.g., timeout after idle time) [1] (report under item 6a).

Principal findings: "This study aimed to assess the effectiveness of the Headspace Sleep Program on sleep disturbance and mental health outcomes in adults with clinical insomnia, with results suggesting strong support for the study hypotheses. Specifically, insomnia symptoms significantly decreased, and sleep quality (subjective and objective) and mental health outcomes significantly improved for participants randomized to the Headspace Sleep Program group versus those randomized to the waitlist control group. Importantly, the program's benefits were maintained 3 weeks post-intervention. In terms of clinical significance, substantially more participants in the Headspace Sleep Program group showed elevated remission rates and higher treatment response compared with participants in the control group - suggesting that the Headspace Sleep Program was effective on key clinical endpoints."

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Dit svar

20) Trial limitations, addressing sources of potential bias, imprecision, and, if relevant, multiplicity of analyses

# 20-i) Typical limitations in ehealth trials

Typical limitations in ehealth trials: Participants in ehealth trials are rarely blinded. Ehealth trials often look at a multiplicity of outcomes, increasing risk for a Type I error. Discuss biases due to non-use of the intervention/usability issues, biases through informed consent procedures, unexpected events.

"(...)the study had several limitations. Response bias may have impacted the self-report survey results. While actigraphy was included to counter the self-report sleep quality data, future studies should include more objective measures. While medication use was balanced between study groups, it was not controlled for in the statistical analyses. Finally, this study used a waitlist control group, future research should include comparisons to traditional insomnia treatments."

21) Generalisability (external validity, applicability) of the trial findings NPT: External validity of the trial findings according to the intervention, comparators, patients, and care providers or centers involved in the trial

# 21-i) Generalizability to other populations

Generalizability to other populations: In particular, discuss generalizability to a general Internet population, outside of a RCT setting, and general patient population, including applicability of the study results for other organizations

important

# 21-ii) Discuss if there were elements in the RCT that would be different in a routine application setting

Discuss if there were elements in the RCT that would be different in a routine application setting (e.g., prompts/reminders, more human involvement, training sessions or other co-interventions) and what impact the omission of these elements could have on use, adoption, or outcomes if the intervention is applied outside of a RCT setting.

About the CONSORT EHEALTH checklist
As a result of using this checklist, did you make changes in your manuscript? *  o yes, major changes  yes, minor changes
O no
What were the most important changes you made as a result of using this checklist?
I would say the level of detail in the methods section was most important.
How much time did you spend on going through the checklist INCLUDING  * making changes in your manuscript
Around 3 hours was used in making these improvements to our manuscript
As a result of using this checklist, do you think your manuscript has improved? *
yes
no Andet:
Andet

This	ld you like to become involved in the CONSORT EHEALTH group? would involve for example becoming involved in participating in a workshop and g an "Explanation and Elaboration" document
0 )	yes
o r	no
