

Supplementary figures

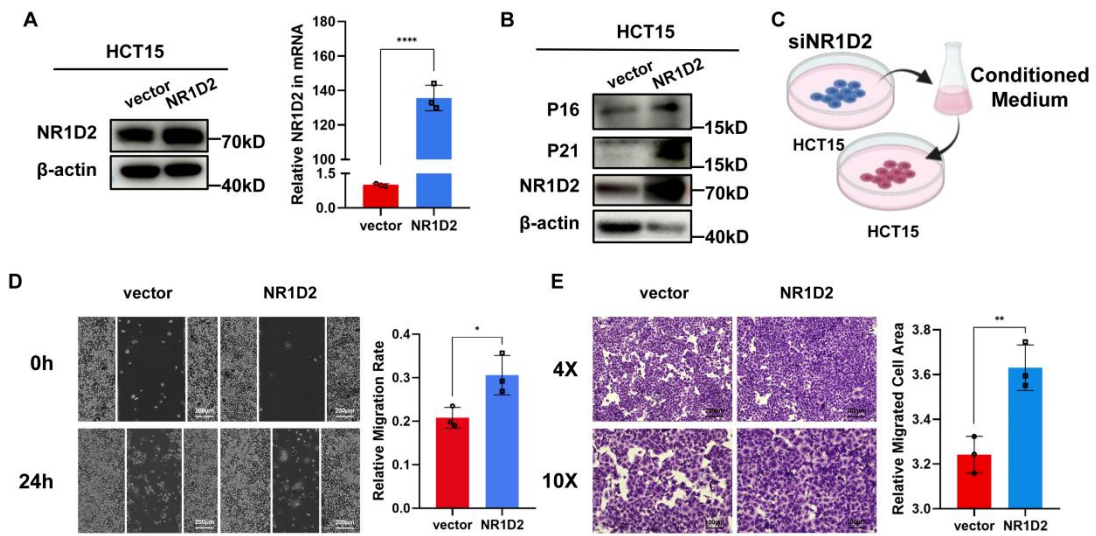

Figure S1. (A) The NR1D2 overexpression level of mRNA and protein. (B) P16 and P21 protein levels assessed by Western blot after NR1D2 overexpression. (C) Indirect co-culture model. (D-E) Wound healing assays and Transwell assays were performed to detect the migration level of NR1D2 overexpression in HCT15. * means $P < 0.05$, ** means $P < 0.01$, *** means $P < 0.001$, **** means $P < 0.0001$.

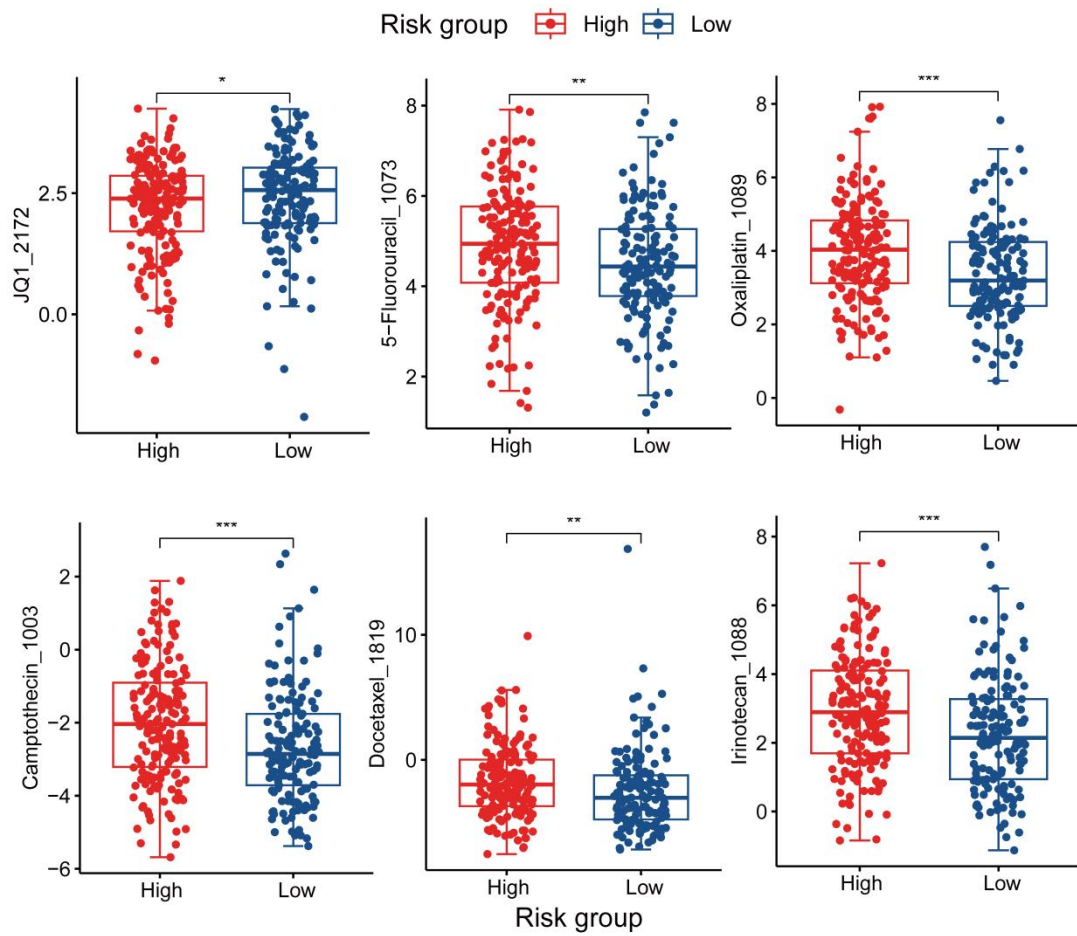

Figure S2. Comparative analysis of relative drug sensitivity between MALISS high- and low-risk groups, including JQ1, 5-Fluorouracil, Oxaliplatin, Camptothecin, Docetaxel, and Irinotecan. * means $P < 0.05$, ** means $P < 0.01$, *** means $P < 0.001$, **** means $P < 0.0001$.
