This file includes:

Table S1. Basic information about the four pain medications studied and their active ingredients by ATC Category in UK Biobank.

Table S2. Summary of instrumental variables for four pain medications studied.

Table S3. MR Power calculation for detecting significant ($P < 0.05$) causal effect of the four pain medications studied on the risk of gut microbiota and circulating metabolites.

Table S4. MR Results NSAID and Salicylic acid of on gut microbiota.

Table S5. MR Results the four pain medications studied of on circulating metabolites.

Figure S1. Scatterplot of Mendelian randomization (MR) estimates between NSAID, Salicylic acid and gut microbiota.

Figure S2. Scatterplot of Mendelian randomization (MR) estimates between the four pain medications studied and circulating metabolites.

Figure S3. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between NSAID, Salicylic acid use, and genetically determined gut microbiota traits ($p < 1 \times 10^{-5}$).

Figure S4. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between the four pain medications studied and genetically determined circulating metabolites traits ($p < 1 \times 10^{-5}$).

MR, mendelian randomization; NSNPs, number of single nucleotide polymorphisms; R^2 , the proportion of variance explained by exposure. R^2 for each SNP: $R^2 = [\text{beta. exposure}^2] / [\text{se. exposure}^2 * N + \text{beta. exposure}^2]$; R^2 combined = $\text{SUM}[R^2]$.

MR, mendelian randomization; NSAID and Salicylic acid, common pain medications; IVW, inverse-variance weighted; NSNPs, number of single nucleotide polymorphisms; Beta, mendelian randomization effect estimate; CI, confidence interval; RSSobs, residual sums of squares of observations;

Figure S1. Scatterplot of Mendelian randomization (MR) estimates between NSAID, Salicylic acid and gut microbiota.

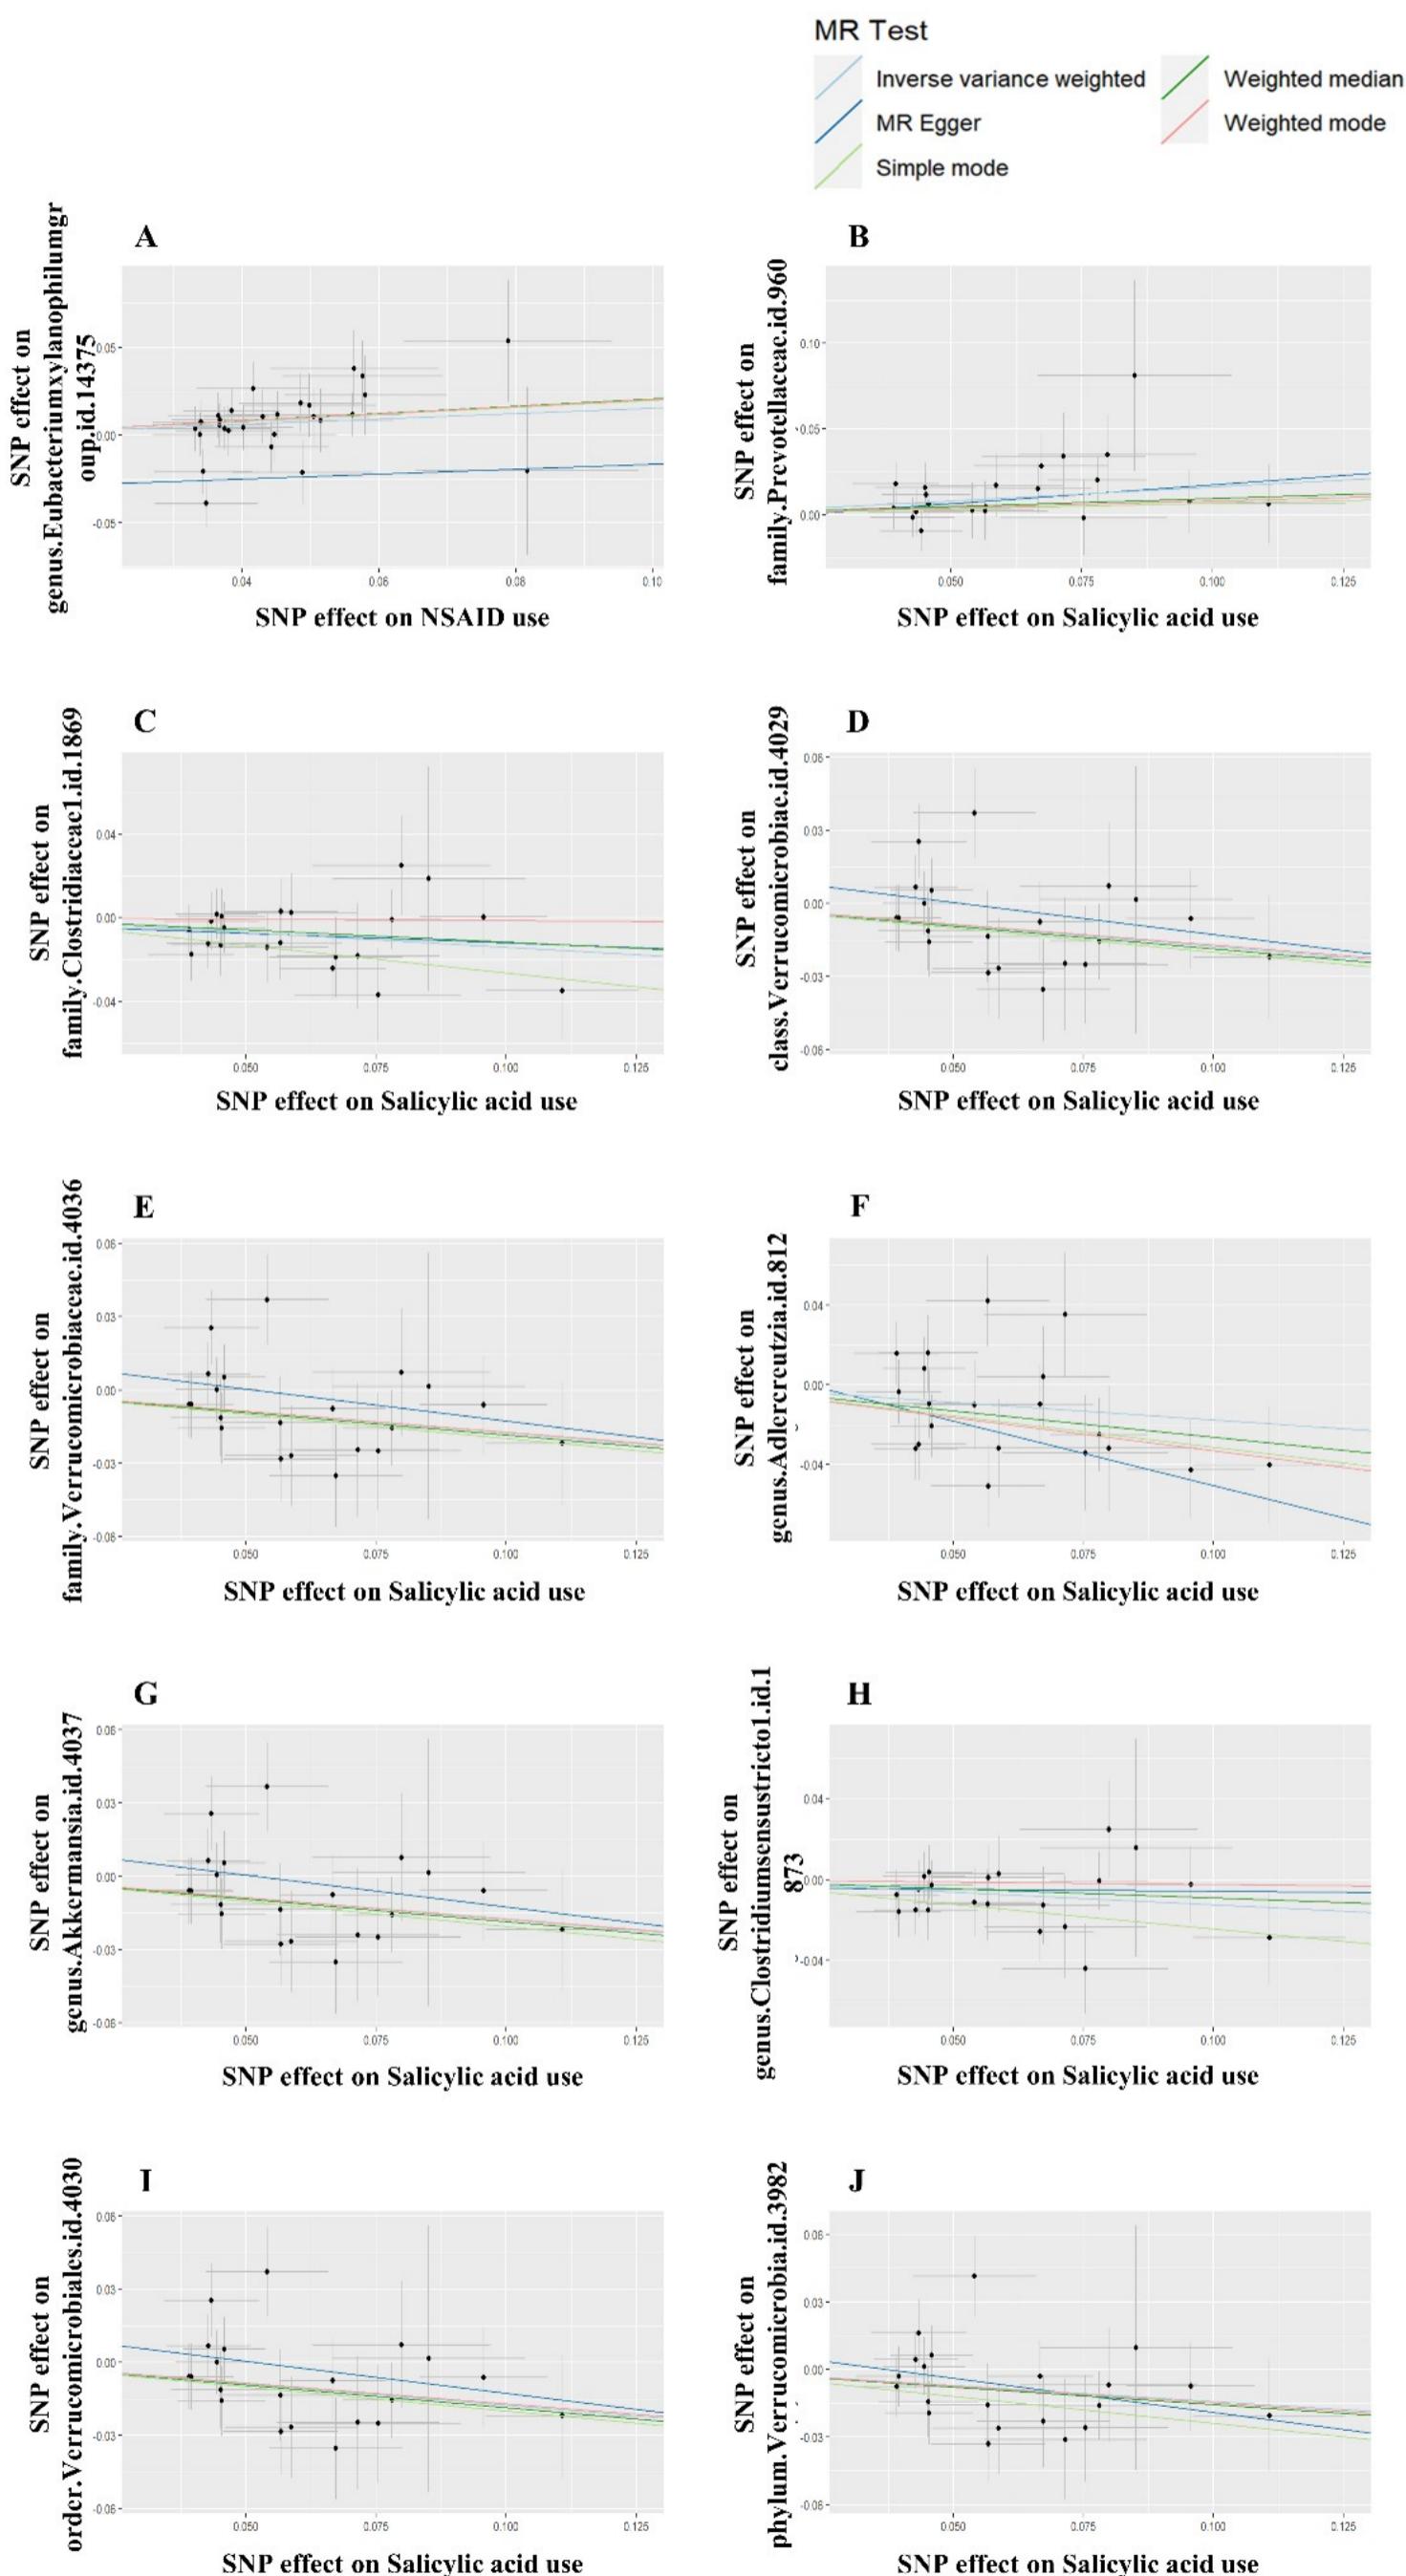

Figure S2. Scatterplot of Mendelian randomization (MR) estimates between the four pain medications studied and circulating metabolites.

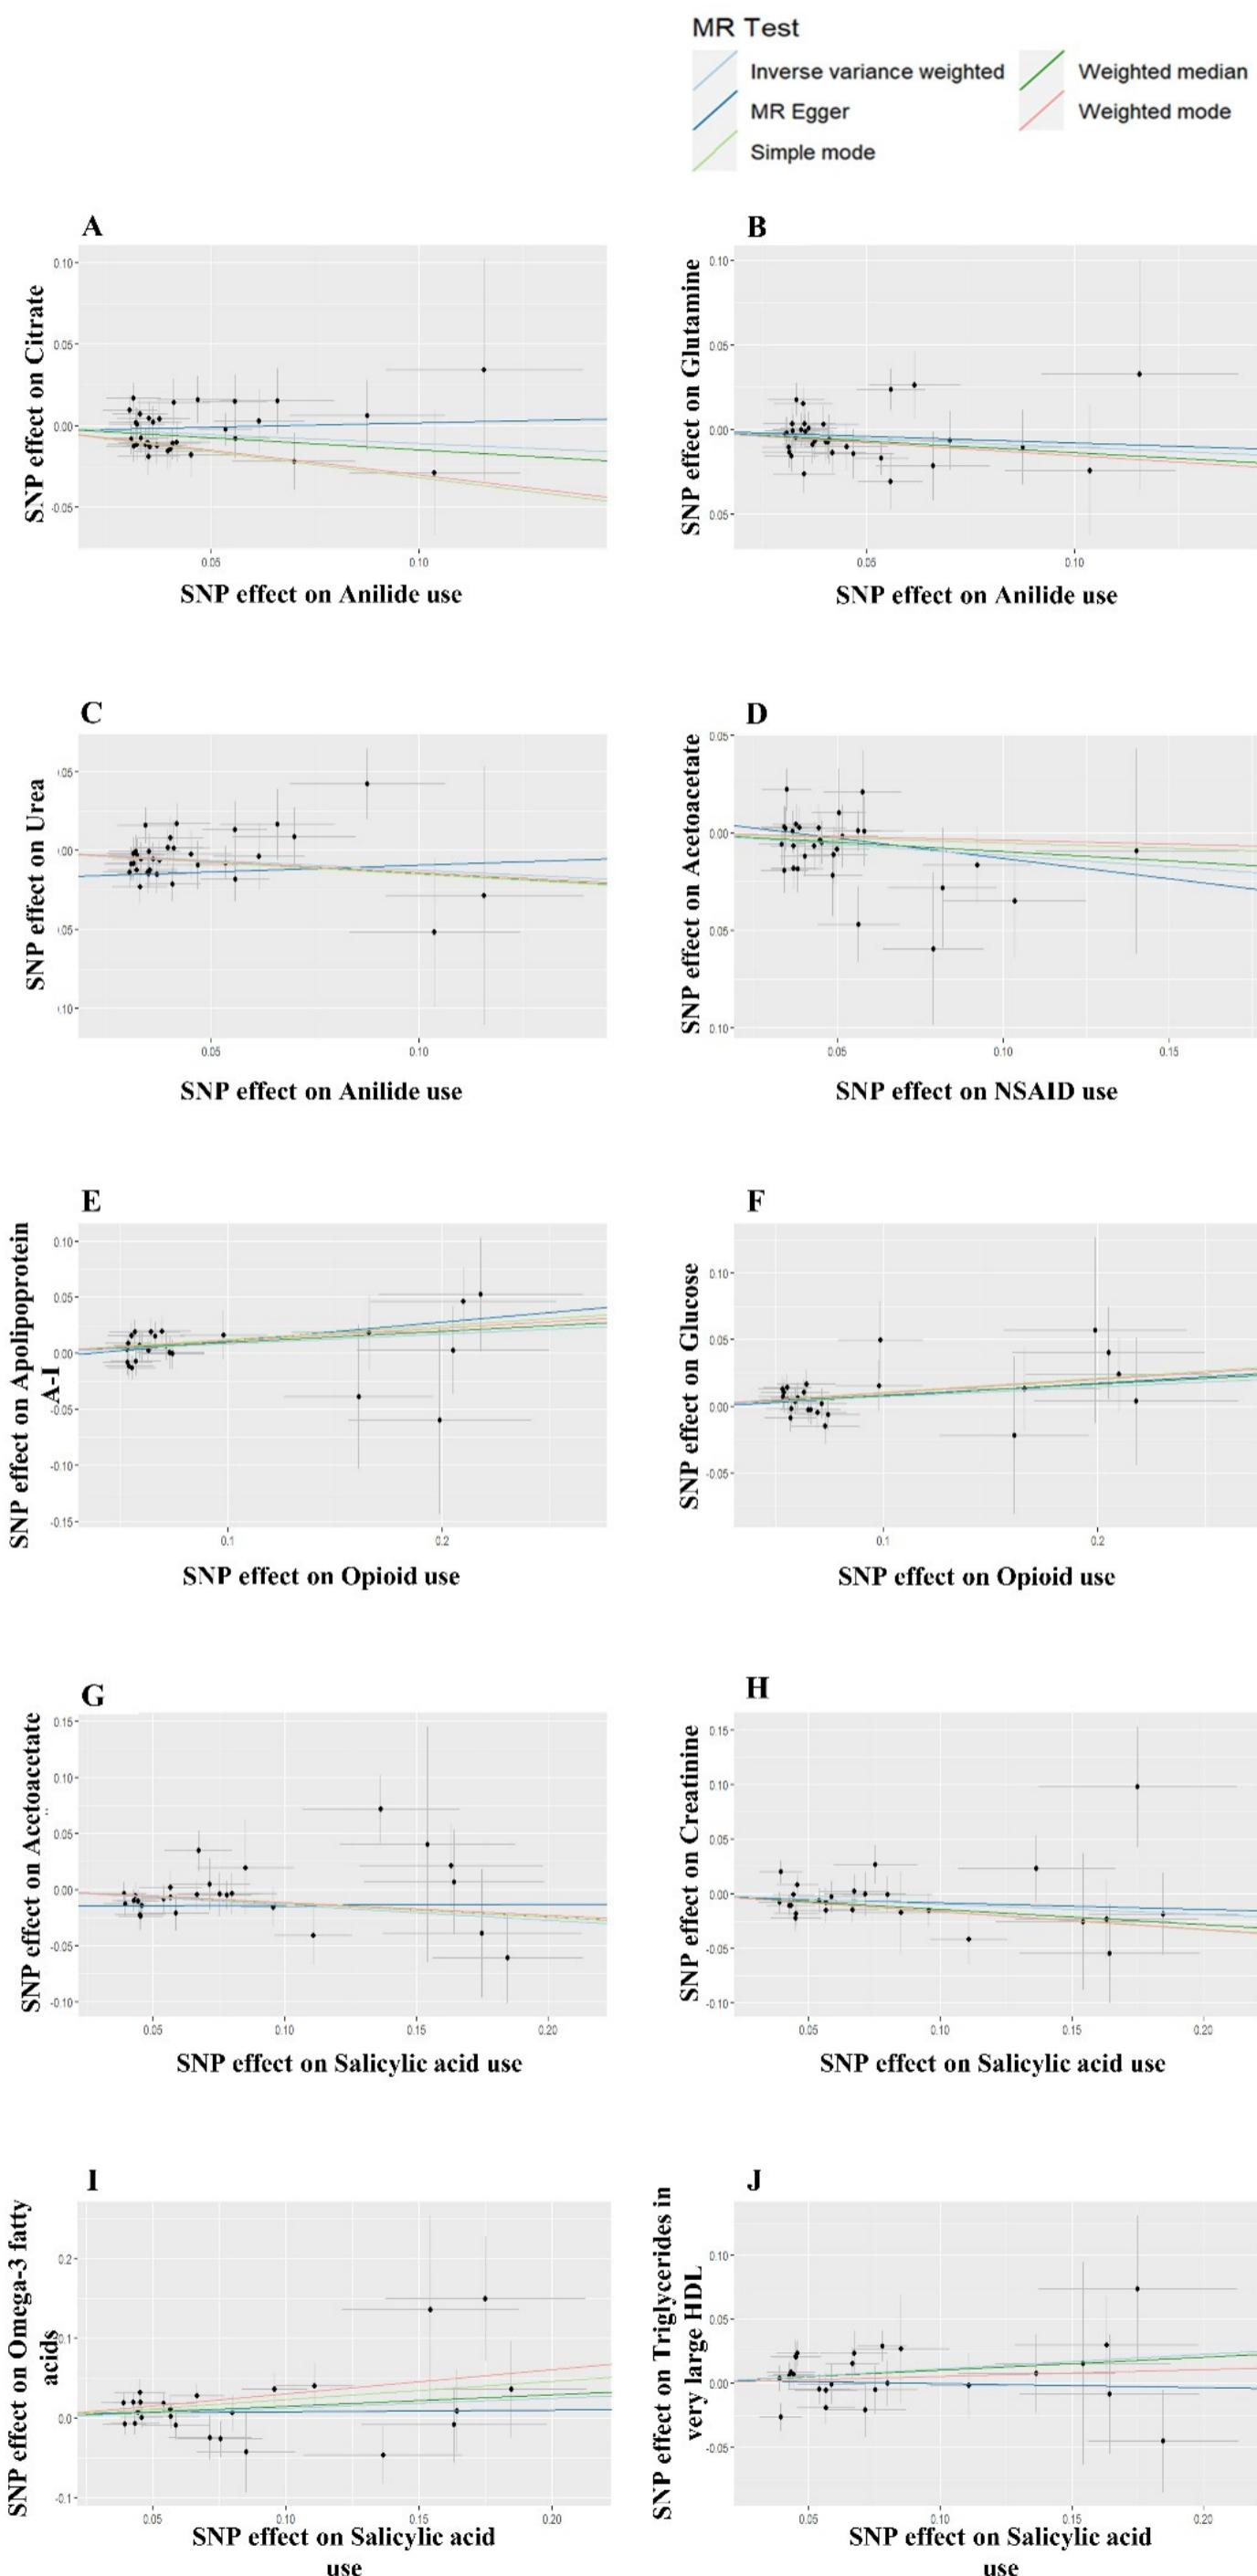

Figure S3. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between NSAID, Salicylic acid use, and genetically determined gut microbiota traits ($p < 1 \times 10^{-5}$).

Black dots indicated the IVW estimates (raw beta) after leaving a single SNP in turns. Red dots indicated the pooled IVW estimate (raw beta). Horizontal lines indicated the range of 95% confidence interval.

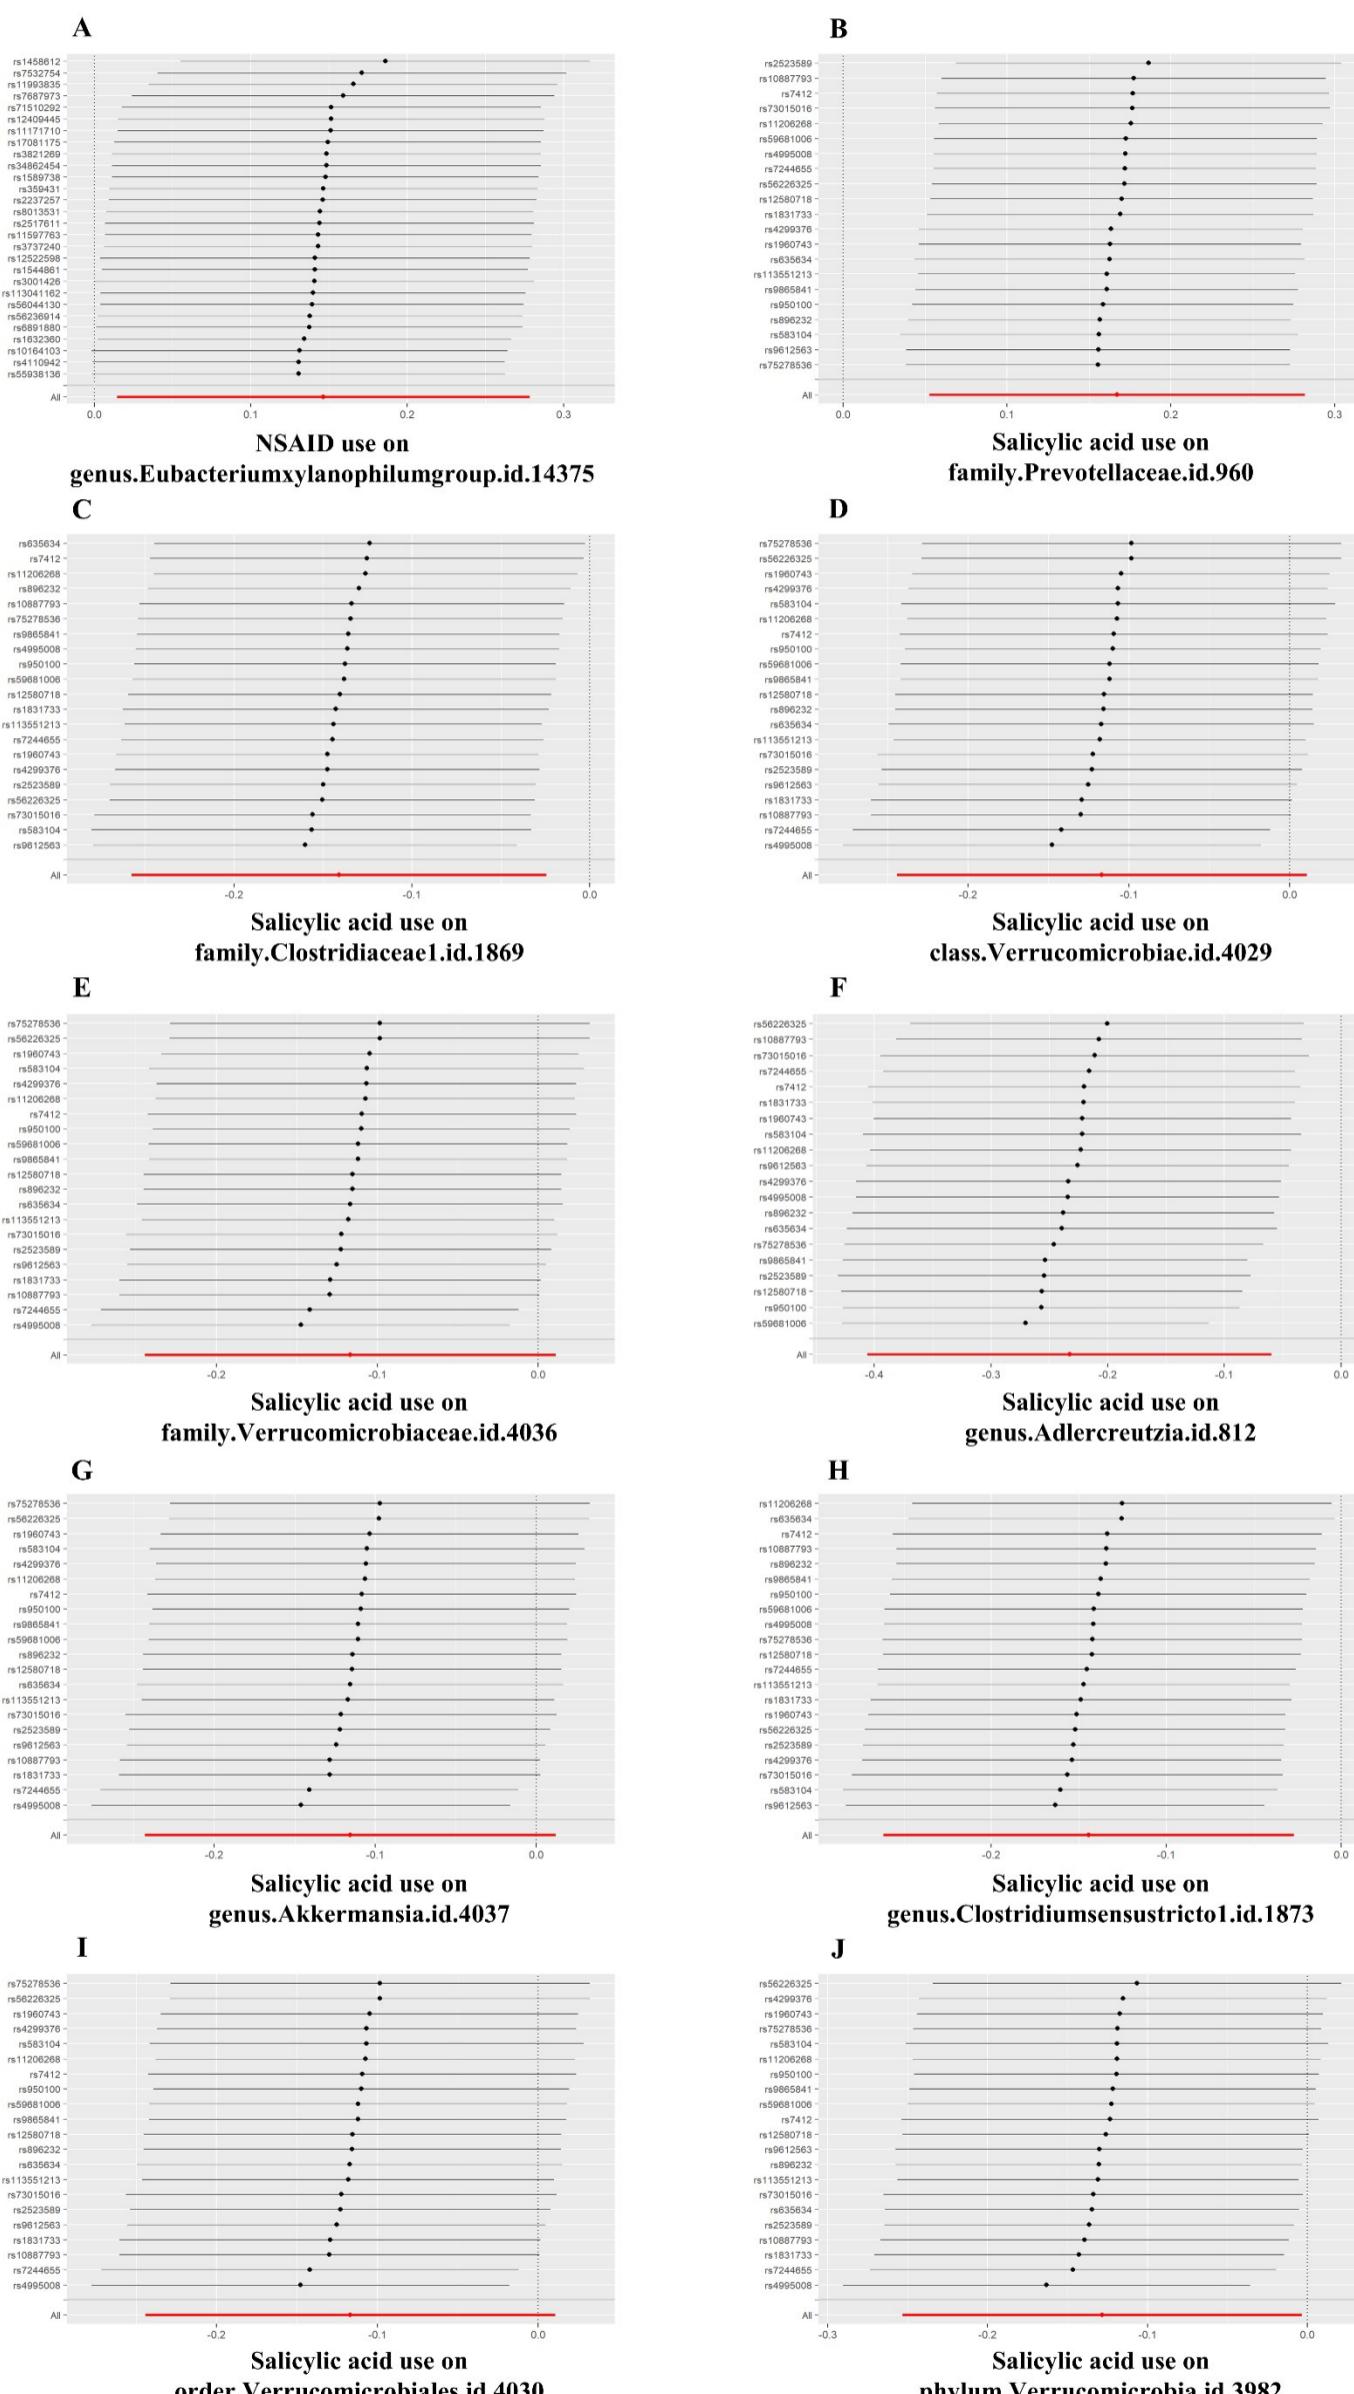

Figure S4. Leave-one-out analysis of inverse-variance weighted (IVW) estimates between four prescription pain medications and genetically determined circulating metabolites traits ($p < 1 \times 10^{-5}$).

Black dots indicated the IVW estimates (raw beta) after leaving a single SNP in turns. Red dots indicated the pooled IVW estimate (raw beta). Horizontal lines indicated the range of 95% confidence interval.
