

Supplementary Figure 1. Screening of phages expressing scFvs specific to APC 1472SP2/HLA-A24 complex.

1472SP2-HLA-A24, unrelated 1512SP3-HLA-A24 or empty HLA-A24 monomers were bound to the plate and then incubated with supernatant of the phage clones, followed by detection with an anti-M13 antibody. Optical density at 450 nm was measured on a spectrophotometric plate reader. Asterisks (*) represent positive clones, related to **Figure 1**.
