

Supplemental Figure

Figure S1. Putative physical loci of homology regions of L51 and L11 on male-specific region of *A. chinensis*
Note: L51 and L11 were aligned to different parts of LC482709.1, respectively. The male sex-determining gene *Friendly boy* of *A. chinensis* is also located on LC482709.1 (Akagi et al. 2019. Nature Plants.). The distance between L51 and L11 is ~33kb, and the distance between *Friendly boy* and L51 is ~118kb.
