This supplementary material has been provided by the authors to give readers additional information about their work.

eTable 1. Milestones utilized to define milestone developmental delay

<u>Milestone</u>	<u>Method of evaluation</u>	<u>Pass</u>
Recognizes familiar objects and pronounces them by name (Language-social)	The toddler is asked to name a variety of items or pictures that the examiner points to in the room while asking "What is it? What is it called?"	The toddler will name several items from the familiar environment, such as: clothing, furniture, games, fruits, animals and more. Mispronunciations are acceptable.
Understands actions and speech without gestures (Language-social)	The toddler is required to understand and perform actions asked by the examiner, literally without marking with a gesture or hint, with objects from the assessment kit. For example: Show me what do we drink with or give me the cup.	The toddler understands at least 3 actions such as: give, show, put. Understands at least one preposition such as - on, within.
Participates in a dialogue (Language -Social)	It is advisable to listen during the entire visit to the conversation that develops between the mother and the toddler. It should be monitored and seen whether a dialogue develops with the adults during the evaluation, whether the child expresses feelings and desires appropriately. Does he ask situation appropriate questions like: who? what? where?	The toddler initiates a verbal dialogue with the examiner or parent in a suitable situation, expresses his desires, responds to his interlocutor's response and able to share experiences from everyday life. Please note: Reverberating words without meaning or intention of communication will not be considered as speech aimed at communication purposes and requires further evaluation.
Runs well without falling (Motor)	If possible, performed during the visit at the station. The examiner should pay attention to the child's organization before performing the task. Multiple falls requires attention and reference	The toddler runs freely and confidently, stepping on each foot fully, while paying attention to obstacles in his path and his ability to bypass them without dropping them.
Climbs up and down the stairs without an adult's assistance (Motor)	If possible, performed during the visit at the station. The child should be encouraged to go up and down the stairs with a railing that he can hold under supervision.	The toddler goes up and down the stairs with the help of a railing, without the support of an adult.
Imitates horizontal, vertical and circle lines (Motor)	The toddler sits on a chair at a small table next to the parent. The examiner or the parent hands the child a sheet of paper and a pencil, shows him how to draw horizontal, vertical and circle lines.	The toddler imitates horizontal, vertical and circle lines.

eTable 2. Odds ratios (95% CI) for developmental outcomes in the full cohort

Outcome	Breastfeeding exposure	Odds Ratio (95% CI)	P-value
Any milestone delay	Exclusive 6 months	0.73 (0.71 to 0.76)	<.001
	Non-exclusive 6 months	0.86 (0.84 to 0.88)	<.001
	Less than 6 months	1 (Ref.)	
Motor milestone delay	Exclusive 6 months	0.85 (0.79 to 0.91)	<.001
	Non-exclusive 6 months	0.91 (0.86 to 0.96)	0.001
	Less than 6 months	1 (Ref.)	
Language social milestone delay	Exclusive 6 months	0.71 (0.69 to 0.73)	<.001
	Non-exclusive 6 months	0.85 (0.83 to 0.88)	<.001
	Less than 6 months	1 (Ref.)	
Any neurodevelopmental conditions	Exclusive 6 months	0.60 (0.57 to 0.63)	<.001
	Non-exclusive 6 months	0.75 (0.72 to 0.78)	<.001
	Less than 6 months	1 (Ref.)	
Motor neurodevelopmental conditions	Exclusive 6 months	1.01 (0.68 to 1.49)	0.96
	Non-exclusive 6 months	0.71 (0.50 to 1.01)	0.06
	Less than 6 months	1 (Ref.)	
Language social neurodevelopmental conditions	Exclusive 6 months	0.59 (0.56 to 0.62)	<.001
	Non-exclusive 6 months	0.75 (0.72 to 0.79)	<.001
	Less than 6 months	1 (Ref.)	
Undetermined neurodevelopmental conditions	Exclusive 6 months	0.68 (0.55 to 0.84)	<.001
	Non-exclusive 6 months	0.82 (0.69 to 0.96)	0.01
	Less than 6 months	1 (Ref.)	

eTable 3. Population characteristics before and after matching, by breastfeeding exposure

The matching was exact for categorical covariates (bio-social risk, multiple pregnancy, firstborn) and caliper for continuous covariates (gestational age, socioeconomic status, birth year).

	Pre-Matching, Children, No. (%)			Post-Matching, Children, No. (%)		
	Less than 6 months of breastfeeding	Breastfeeding for at least 6 months		Less than 6 months of breastfeeding	Breastfeeding for at least 6 months	
Characteristic, n (%)	N = 272,961	N = 297,571	SMD	N = 228,210	N=228,210	SMD
Breastfeeding months, Median (IQR)	1 (0-3)	12 (9-18)	2.79	1 (0-3)	12 (8-18)	2.24
