

CORRECTION

Correction: Who's opting-in? A demographic analysis of the U.K. NHS Organ Donor Register

Catrin Pedder Jones, Chris Papadopoulos, Gurch Randhawa

An incorrect Cramer's V value appears twice in the article. The value appears as .90; the correct value is .09.

As a result, in the Tests of association subsection of the Results, the last sentence of the "Gender x organ preference" paragraph is incorrect. The correct sentence is: The associations for all organs were very weak except Cornea ([11]; Kidney $V = .01$, Pancreas $V = < .01$, Heart $V = .02$, Lungs $V = < .01$), however the association strength for Cornea was close to the threshold of note $V = .09$ (Cohen, 1988).

In addition, in the Discussion section, the penultimate sentence of the 13th paragraph is incorrect. The correct sentence is: Examining the results for the variables nation and gender, no result reached the Cramer's V value of .1 however the analyses examining gender with cornea preference was near this threshold at .09.
