

TO REMOVE TEETH FROM RUBBER PLATE WITHOUT DANGER OF CRACKING OR ETCHING THE TEETH.—Boil the plate in glycerin, in a porcelain pan, till it smokes, and the teeth will come away clean and free from discoloration. Put them back in the glycerin to anneal them, and when cool wash in warm water. They will be as bright as when new. The glycerin can be bottled for future use.—*Dr. Genese, Ohio Dental Journal.*

PREVENTION OF DECAY.—In my own practice I rely chiefly upon a strong solution of hydronaphthol in oil of cassia. This I use freely in all cavities, and before filling I use a varnish of Canada balsam in chloroform in which there is 10 percent of hydronaphthol.—*J. Leon Williams, Items of Interest.*

HEMORRHAGE AFTER PULP EXTIRPATION.—Wind cotton on a broach, dip in 25 percent pyrozone and put up the canal, and the bleeding will stop instantly. The canal can be dried and filled at once.—*L. West, Items of Interest.*

NEURALGIA.—Equal parts of benzoin and oil of peppermint rubbed on the affected part, or sprinkled on a cloth wrung out of hot water, in many cases acts like a charm—*Pacific Medical Gazette.*

MINUTES OF OHIO STATE DENTAL SOCIETY.

The Society met in the Great Southern Hotel at Columbus, Ohio, at 11 A. M., Tuesday, December 5, 1899. At this session no business was transacted.

The afternoon session was called at 2 P. M., at which time the president's address, by Dr. L. P. Bethel, was read and, on motion, referred to a committee for report.

Dr. G. S. Junkerman then read a paper entitled "A
