## Dear editor

We appreciate the thoughtful considerations of Peter Wostyn concerning our paper Lipocalin-type prostaglandin D synthase concentration gradients in the cerebrospinal fluid in normal-tension glaucoma patients with optic nerve sheath compartmentation.<sup>1</sup> We are aware of his many creative contributions to the field of glaucoma and neurodegeneration.

We fully agree that impaired cerebrospinal fluid (CSF) dynamics may play a crucial role in normal-tension glaucoma<sup>2</sup> as well as in the pathophysiology of other neurodegenerative diseases, such as Alzheimer's<sup>3</sup> and Parkinson's disease.<sup>4</sup> Elevated Lipocalin-type prostaglandin D-synthase (L-PGDS) levels in the lumbar CSF in our cohort of normal-tension glaucoma patients compared to the concentration measured in healthy controls in other studies might indeed indicate generalized dysfunctional CSF dynamics in patients with normal-tension glaucoma.

CSF and its content are distributed between the extracranial and the intracranial CSF spaces, eg, subarachnoid spaces, cisterns and ventricles. In order for CSF to perform its multiple functions, it also needs to be distributed within the parenchyma of the brain and the optic nerve itself. It therefore would be of great interest to know more about the concentration of proteins, such as L-PGDS, alpha synuclein and abetalipoprotein not only in the CSF surrounding the brain, but in the brain parenchyma (interstitial fluid) as well. The mechanism by which it is transported within parenchyma is still shrouded in mystery<sup>5</sup> and should be subject of future studies.

## Disclosure

The authors report no conflicts of interest in this communication.

### Publish your work in this journal

Eye and Brain is an international, peer-reviewed, open access journal focusing on clinical and experimental research in the field of neuro-ophthalmology. All aspects of patient care are addressed within the journal as well as basic research. Papers covering original research, basic science, clinical and epidemiological studies, reviews and

evaluations, guidelines, expert opinion and commentary, case reports and extended reports are welcome. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.

Submit your manuscript here: <https://www.dovepress.com/eye-and-brain-journal>
