# Erratum to: Maternal intake of seafood and supplementary long chain n-3 poly-unsaturated fatty acids and preterm delivery

Anne Lise Brantsæter<sup>1\*</sup>, Linda Englund-Ögge<sup>2</sup>, Margareta Haugen<sup>1</sup>, Bryndis Eva Birgisdottir<sup>3</sup>, Helle Katrine Knutsen<sup>1</sup>, Verena Sengpiel<sup>2</sup>, Ronny Myhre<sup>4</sup>, Jan Alexander<sup>5</sup>, Roy M. Nilsen<sup>6</sup>, Bo Jacobsson<sup>4,7</sup> and Helle Margrete Meltzer<sup>1</sup>

## Erratum

In the original publication of this article [1], the categories for lean and fatty fish in Fig. 2 should have been listed as servings per week and not per day. Please see updated figure below.

**Fig. 2** Associations (hazard ratio (HR) and 95% confidence intervals (CI)) between intakes of lean fish, fatty fish and marine long chain n-3 polyunsaturated fatty acids (LCn-3PUFA) from supplements and preterm delivery. Intakes are mutually adjusted and adjusted for maternal age, pre-pregnancy BMI, height, parity, energy intake, maternal education, smoking, marital status, household income and previous preterm delivery. *N* = 67,007 women in the Norwegian Mother and Child Cohort Study (MoBa) 2002–2008
