Hans-Jochen&Liselotte VOGEL:„Mehr Gerechtigkeit“, 2019 „Wohn-Irrsinn“ (Enteignungen). ZANTKE,S (Richter-Amtsgericht-Zwickau): TV-Programm,„Auf einen Blick“ Nr.47,2018,S.24. [6]-Luetge,Ch et-al.(ed): Experimental-Ethics, Palgrave-Macmillan 2014. [7]-Pegoraro,R/Vatican: «Arzt&Christ» 38:3-55,1992.

**Results:** RESULTS Prominent German experts for justice: Patrick BUROW, Jens GNISA/President Law-Association/Germany, Torsten SCHLEIF/Amtsrichter, Hans-Jochen VOGEL/Ex-Minister, Stephan ZANTKE/Richter reflect in their books fundamental-criticism of German justice [5]. Inst.-Ecol.-Med./IUM investigated psychopathology of juridical-offices&law-court in Munich (Amtsgericht). Analysis suggests presence of symptoms for pseudologia-phantastica, psychopathy, cyclophrenia (esp.mania),-etc. conc. observations on many persons (n>30).

**Conclusions:** CONCLUSION. Juridical situation in Germany demonstrates contradiction to human-rights (EU-CHARTA, art.1-8/25-26/33-35), ignoring moral-philosophy, related to human obligations/I.Kant-[1], experimental ethics/Ch.Luetge et-al.-[6], medical personnel/R.Pegoraro-[7]. Only paradigm change in law-policy incl. enlarged implication of moral philosophy-theology, psychiatry-psychology, social philosophy in juridical eduction & practices could counteract disastrous juridical situation in Germany and on global level, supporting UNO-AGENDA21 for better education-health-ecology-economy (see 2.).

doi: 10.1192/j.eurpsy.2021.2043

**Introduction:** Ayahuasca has potential therapeutic benefits.

**Objectives:** Expose the potential benefits of ayahuasca from neuropharmacology and clinical existing evidence.

**Methods:** A literature review was carried out in the databases pubmed, clinical key and texts of scientific dissemination.

**Results:** There's scientific literature about the potential therapeutic use of ayahuasca in dependencies, anxiety symptoms and depression, near death experiences and terminal illnesses. Possible benefit is postulated in impulsivity and personality disorders. It induces an introspective state, triggered by thoughts, emotions and autobiographical memories, which promotes reflection on personal issues, allowing new perspectives on certain life issues. It is common for users to describe it as analogous to a psychotherapeutic intervention. 5HTA2 agonists stimulate the expression of genes that encode transcription factors such as c-fos, egr 1, egr 2 and brain-derived neurotrophic factor (BDNF), which influence neuronal plasticity and are associated with cognitive aspects such as memory and attention. MAOIs and 5HT2A agonism have anxiolytic and antidepressant effects. Sigma -1 agonism promotes neuroplasticity. Decrease and remission in the consumption of alcohol and cocaine has been reported in patients with abuse and dependence. There has been significant decrease in depressive symptomatology, in observational studies, cases and controls and double blind compared with placebo. Improvement in different domains measured with mindfulness scales, similar to those observed in meditators, suggests an association between mindfulness techniques and experiences with ayahuasca.

**Conclusions:** There is existing evidence about potential therapeutic uses of ayahuasca. More studies are needed with bigger samples, to establish it's clinical use.

**Disclosure:** No significant relationships.

**Keywords:** ayahuasca; therapeutic; neuropharmacology
