

Figure S1. Length of roots of *A. arenosa* (grey) and *A. halleri* (green) at the end of experiment (120 h). Ctr – control; Cd – 1.0 mM Cd treatment; Zn – 5.0 mM Zn treatment. Values are means \pm SE (n = 6). Means followed by the same letter for each species are not significantly different from each other using the HSD test ($P < 0.05$).
