Dear editor

We have read the research article entitled “Knowledge, Attitudes, and Practices Among Middle-Aged and Elderly Population Towards Ultrasound Screening for Strokes” by Wenwen Wang, Yuanyuan Peng, Keqiang Tang, Ziwei Zheng, Lan He, Shaoling Yang, published in the Journal of Multidisciplinary Healthcare 2024.¹ We would like to congratulate the authors on this successful article, and make some contributions. 1) This research provides valuable insight into the knowledge, attitudes and practices of using ultrasound as an initial step in preventing stroke. 2) This research shows that it is important to use USG in preventing stroke.

However, this research has a limitation other than those stated by researchers in this journal. Distributing questionnaires online has the advantage of being cost-effective and fast, however researchers cannot directly supervise filling out questionnaires which can affect the accuracy of the data.² It is possible that the questionnaire was not filled out by the respondent but by the respondent's family, so that the data obtained could be biased. Suggestions for future research, researchers need to consider using direct data collection methods, so that it is hoped that the data obtained will be unbiased and valid.

Disclosure

The authors report no conflicts of interest in this communication.

Publish your work in this journal

The Journal of Multidisciplinary Healthcare is an international, peer-reviewed open-access journal that aims to represent and publish research in healthcare areas delivered by practitioners of different disciplines. This includes studies and reviews conducted by multidisciplinary teams as well as research which evaluates the results or conduct of such teams or healthcare processes in general. The journal covers a very wide range of areas and welcomes submissions from practitioners at all levels, from all over the world. The manuscript management system is completely online and includes a very quick and fair peer-review system. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
