

## Authors' reply

Sir,

We thank the authors for reading our article with interest and raising valid concerns about our study. Understanding about the choroidal measurements and its variability has increased in recent past. We agree with the authors about the effect of exercise and mydriatic on choroidal thickness and these factors will be considered in future studies. In our study, none of the study subjects were smokers. Again, we appreciate authors' interest in choroidal imaging and contribution to the literature.

### Financial support and sponsorship

Nil.

### Conflicts of interest

There are no conflicts of interest.
