Keywords: crystal structure; iridium(III) complex; *C,N*-bidentate ligand; *fac*-C_3N_3 coordination set; π–π stacking interactions.

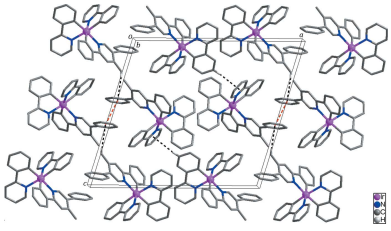
CCDC reference: 1515004

Supporting information: this article has supporting information at journals.iucr.org/e

In the title compound, $[Ir(C_{11}H_8N)_2(C_{18}H_{14}N)]$, the Ir^{III} ion adopts a distorted octahedral coordination environment defined by three *C,N*-chelating ligands, one stemming from a 2-(4-phenyl-5-methylpyridin-2-yl)phenyl ligand and two from 2-(pyridin-2-yl)phenyl ligands, arranged in a facial manner. The Ir^{III} ion lies almost in the equatorial plane [deviation = 0.0069 (15) Å]. In the crystal, intermolecular π–π stacking interactions, as well as intermolecular C—H$\cdots\pi$ interactions, are present, leading to a three-dimensional network.

1. Chemical context

Cyclometallated iridium(III) complexes with the chelating ligand 2-phenylpyridine (C^N) are of great interest in phosphorescence organic light-emitting diodes (OLEDs) due to their high quantum efficiency and easy tuning emission energy (Kang *et al.*, 2013). In general, iridium(III) complexes with chelating C^N ligands can be divided into two groups, homoleptic and heteroleptic complexes, according to the coordination environment of the central Ir^{III} atom. The structural characteristics involving other chemical/electronic properties for both homoleptic $Ir(C^N)_3$ and heteroleptic $Ir(C^N)_2(L^X)$ complexes, where L^X is a monoanionic O^O or N^O ligand, have been well explored over the past two decades (Chi & Chou, 2010). However, reports of the molecular and crystal structures of heteroleptic Ir^{III} compounds with the same chelating modes, *viz.* $Ir(C^N)_2(C^N)'$, are very scarce compared to those for $Ir(C^N)_2(L^X)$ (Jung *et al.*, 2012; Natori *et al.*, 2013). Herein, we describe the structure of the title Ir^{III} complex, *fac*-{2-[(4-phenyl-5-methyl)pyridine-2-yl]phenyl-κ^2C^1,N}bis[2-(pyridine-2-yl)phenyl-κ^2C^1,N]iridium(III), which was synthesized by the reaction of $[(C^N)_2Ir(\mu\text{-Cl})]_2$ and 4-methyl-2,5-diphenylpyridine in the presence of Ag^I.



2. Structural commentary

In the title compound, the asymmetric unit comprises of one Ir^{III} ion, two 2-phenylpyridine ligands, and one 4-methyl-2,5-diphenylpyridine ligand (Fig. 1). The Ir^{III} ion is six-coordinated by the three *C,N*-bidentate ligands, giving rise to a distorted octahedral coordination environment with bond angles falling in the range 79.27 (12) to 97.37 (13)°. As shown in Table 1, the Ir—C and Ir—N bond lengths in the title

Table 1

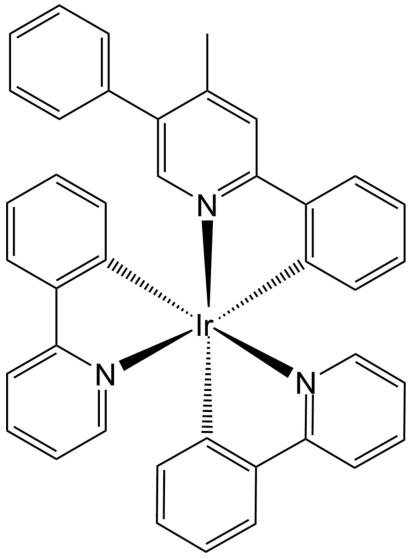
Ir1—C11	2.010 (3)	Ir1—N3	2.125 (3)
C14—Ir1—C36	94.78 (13)	C11—Ir1—N2	88.63 (11)
C14—Ir1—C11	97.37 (13)	N1—Ir1—N2	96.33 (11)
C36—Ir1—C11	95.40 (13)	C14—Ir1—N3	86.75 (11)
C14—Ir1—N1	174.67 (11)	C36—Ir1—N3	79.51 (13)
C36—Ir1—N1	89.78 (12)	C11—Ir1—N3	173.73 (12)
C11—Ir1—N1	79.41 (12)	N1—Ir1—N3	96.81 (10)
C14—Ir1—N2	79.27 (12)	N2—Ir1—N3	96.80 (11)
C36—Ir1—N2	173.22 (11)		

compound are within the ranges reported for similar Ir^{III} compounds (Jung *et al.*, 2012). The pyridyl N atoms of the three ligands are arranged in a *fac*-configuration around the octahedrally coordinated Ir^{III} ion. The equatorial plane is defined by the N1/N3/C14/C11 atoms, the mean deviation from the least-squares plane being 0.081 Å. The Ir^{III} ion lies almost in the equatorial plane with a deviation of 0.0069 (15) Å. Within the 2-(pyridine-2-yl)phenyl ligands, the dihedral angles between the aromatic rings are 5.6 (2) (between rings N1/C1–C5 and C6–C11) and 5.9 (2)° (between rings N3/C30–C34 and C35–C40). Within the 2-[(4-phenyl-5-methyl)pyridine-2-yl]phenyl ligand, the dihedral angles between the central pyridine ring and the phenyl rings at either end are 1.3 (2) and 43.84 (12)° for the C13–C18 and C22–C27 rings, respectively.



3. Supramolecular features

Intermolecular π–π stacking interactions [$Cg1\cdots Cg1^{i}$ = 3.838 (2) Å; $Cg1$ is the centroid of the C22–C27 ring; symmetry code: (i) $-x$, $-y$ + 2, $-z$] occur in the crystal structure of the title compound (Fig. 2). In addition, weak intermolecular C—H$\cdots\pi$ interactions (Table 2) contribute to the stabilization of the crystal structure.

Table 2
Hydrogen-bond geometry (Å, °).

*Cg*1 and *Cg*2 are the centroids of the C22–C27 and N1/C1–C5 rings, respectively.

D—H$\cdots$*A*	*D*—H	H$\cdots$*A*	*D*$\cdots$*A*	*D*—H$\cdots$*A*
C29—H29*A*$\cdots$*Cg*1^{i}	0.98	2.89	3.589 (4)	136
C39—H39$\cdots$*Cg*2^{ii}	0.95	2.89	3.796 (5)	160

Symmetry codes: (i) $-x, y-\frac{1}{2}, -z-\frac{1}{2}$; (ii) $-x+1, y-\frac{1}{2}, -z+\frac{1}{2}$.

4. Synthesis and crystallization

The ligand 4-methyl-2,5-diphenylpyridine was synthesized according to a literature procedure (Zhou *et al.*, 2013). The title Ir^{III} complex was also prepared according to a literature protocol (Jung *et al.*, 2012). Crystals of the title complex were obtained by allowing a dichloromethane/hexane solution to evaporate slowly at room temperature.

5. Refinement

Crystal data, data collection and structure refinement details are summarized in Table 3. A reflection affected by the beamstop (100) was omitted from the final refinement. All H atoms were positioned geometrically and refined using a riding model, with d(C—H) = 0.95 Å for Csp^2–H, and 0.98 Å for methyl H atoms. For all H atoms, U_{iso}(H) = 1.2U_{eq} of the parent atom.

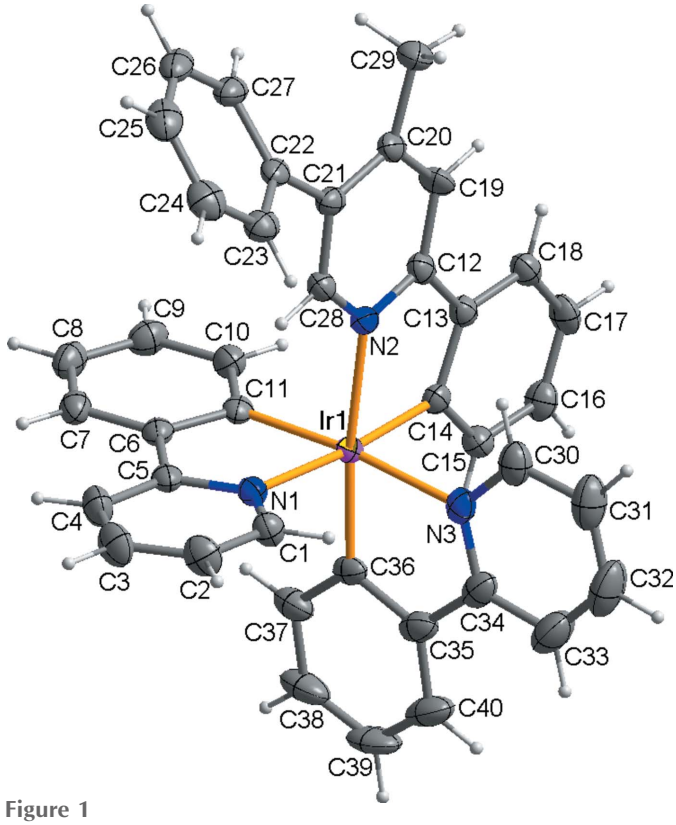


Figure 1
View of the molecular structure of the title compound, showing the atom-numbering scheme. Displacement ellipsoids are drawn at the 50% probability level.

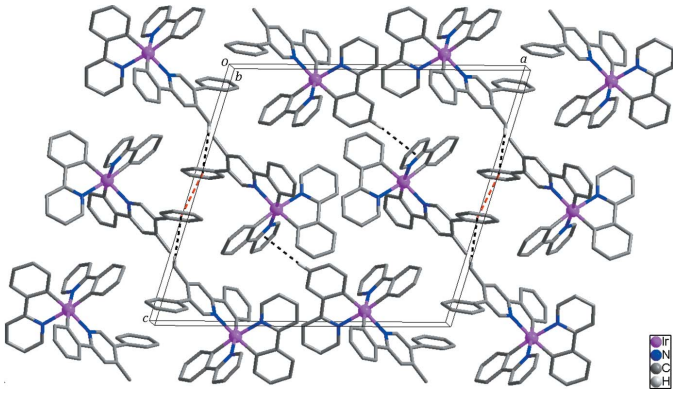

Figure 2
Packing plot of the molecular components in the title compound. Red and black dashed lines represent intermolecular π–π stacking interactions and C—H$\cdots\pi$ interactions, respectively. H atoms not involved in intermolecular interactions have been omitted for clarity.

$\Delta\rho_{min} = -0.71$ e Å^{-3}

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

Hydrogen-bond geometry (Å, º)

*Cg*1 and *Cg*2 are the centroids of the C22–C27 and N1/C1–C5 rings, respectively.

D—H···*A*	*D*—H	H···*A*	*D*···*A*	*D*—H···*A*
C29—H29*A*···*Cg*1^{i}	0.98	2.89	3.589 (4)	136
C39—H39···*Cg*2^{ii}	0.95	2.89	3.796 (5)	160

Symmetry codes: (i) −*x*, *y*−1/2, −*z*−1/2; (ii) −*x*+1, *y*−1/2, −*z*+1/2.
