

Figure S1. Limb bone length and proportions in *Suminia getmanovi*. **A:** Size range known to date for the humerus (a), femur (b), tibia (c), and fibula (d) in *Suminia getmanovi*. KPM skeletal elements under study are highlighted in blue. The size of these bones is given as a percentage of the size of the largest specimen known for this taxon. **B:** Box plots of the limb bone length ratios calculated from articulated individuals (specimens PIN 2212/116, PIN 2212/62, PIN 2212/102, ROM 80979) and ratios calculated for specimen KPM 10/99. Abbreviations: F, femoral length; Fi, fibular length; H, humeral length; T, tibial length.
