

LETTER TO THE EDITOR

Online Risk Calculator for Acute Kidney Injury in the Outpatient Setting

To the Editor:

We have developed an online calculator to enable clinicians and researchers to calculate the risk for outpatient acute kidney injury based on our recently published model.¹ The online calculator may be found at outpatientakirisk.umn.edu. This website allows users to enter required and optional data for a given patient or research participant and provides an estimated risk for outpatient acute kidney injury.

Daniel Murphy, MD, MS
