<sup>a</sup> Adjusting for confounders assessed in pregnancy (housing tenure, marital status, maternal level of education, smoking in pregnancy, maternal family history of depression and maternal psychiatric disorder before pregnancy)

<sup>b</sup> Additionally adjusting for maternal suicide attempt (from pregnancy to child age 11 years)

<sup>c</sup> Additionally adjusting for DSM-IV diagnosis of MDD in offspring (assessed using the DAWBA at ages 7, 10, 13 and 15 years)
