Correction to: Transcriptome profiling of genes related to light-induced anthocyanin biosynthesis in eggplant (*Solanum melongena* L.) before purple color becomes evident

Jing Li¹, Yong-Jun He¹, Lu Zhou¹, Yang Liu¹, Mingmin Jiang¹, Li Ren^{1,2} and Huoying Chen^{1*}

Correction

After publication of the original article [1] it was noted that in Additional file 1: Table S1, and Fig. 1, specific primer sequences were incorrect, and taken from Sme2.5_02154.1_g00001.1 rather than Sme2.5_13923.1_g00001.1.

The primer sequences of *SmCHS* refer to the author's previous study entitled as "Molecular cloning and characterization of anthocyanin biosynthesis genes in eggplant (*Solanum melongena* L.)" [2], which has been published on *Acta Physiologiae Plantarum*. In that study, *SmCHS* was not annotated with the code name from Eggplant Genome Database. However, in the original paper which this Correction refers to, the protein sequence of AtCHS (AT5G13930.1) was employed as a query to search against the Eggplant Genome Database and the results were showed as following:

Sequences producing significant alignments:	Score (bits)	E-Value
Sme2.5_02154.1_g00001.1	661	0.0
Sme2.5_13923.1_g00001.1	656	0.0

Therefore, the authors had interpreted that *SmCHS* was Sme2.5_02154.1_g00001.1 in this study.

The correct Additional file 1 and Fig. 1 are included with this manuscript.
