## Correction

After publication of this Research Article [1], we noted errors in Table 1, and in the rate of thromboembolic events (page 7). Specifically, in Table 1 the percentage of female and male patients were incorrectly given as 7% and 3% respectively. The correct figures are 48.6% female and 51.4% male (please see a corrected version of Table 1 below, and the Additional file 1). The correct rate of thromboembolic events is 3.49% (originally stated as 3.55%).
