Figure S1 Diagram of the "connector". (a) 3D model of the "connector". (b) The "connector" is manufactured by 3D printing.

Table S1 Parameters of the 3-DOF-MRT device

		Parameters
	Volume	30.5 × 20.5 × 16 mm ³
	Inner radius of the microfluidic channel	5.5 mm
	Outer radius of the microfluidic channel	6.5 mm
	Rotational speed (r ₁)	1/6 RPM
	Sample delivery speed	96.0-113.4 μm/s
	Rotational angle (r ₂)	1°/times (-4° to 3°)
	Step length	100 μm/times
	Rotational speed adjustment range of the motor	0-20 RPM
	Sample delivery speed adjustment range	0-1.36×10 ⁻² m/s

Figure S2 Force analysis diagram of the crystal at the top (a) and bottom (b) of the microfluidic channel.

S1. Supplementary Discussion

According to the force analysis, the following circumstances may cause the crystals to deviate from their initial position.

At the top of the microfluidic channel,

$$\frac{mv^2}{r} \geq mg - F_{\mu max} \quad (1)$$

$$\frac{mv^2}{r} \leq mg + F_{\mu max} \quad (2)$$

At the bottom of the microfluidic channel,

$$\frac{mv^2}{r} \leq F_{\mu max} - mg \quad (3)$$

Under the condition of (1), the maximum static friction force ($F_{\mu max}$) of the crystal is not enough to resist gravity (mg) and centripetal force ($\frac{mv^2}{r}$), resulting in the crystal sliding inward. Under the condition of (2), the maximum static friction force and gravity are in the same direction, and the maximum static friction force and gravity are not enough to provide centripetal force, thereby resulting in the crystal moving outward. Under the condition of (3), the maximum static friction force is not enough to resist gravity and centripetal force, resulting in the crystal moving outward.

Table S2 Indexable rate of the diffraction data set obtained under different rotation(r_2) angles.
