In-depth virological and immunological characterization of HIV-1 cure after CCR5 Δ 32/ Δ 32 allogeneic hematopoietic stem cell transplantation

In the format provided by the authors and unedited

6

Supplementary Figure 1. HIV-1 p24 immunohistochemistry of mouse lymph node, liver and spleen. a-c, In vivo viral rescue assay in n = 2 Balb/c Rag2^{-/-} γ c^{-/-} mice showed negative results in the immunohistochemical stainings for HIV-1 p24 Ag in the lymph nodes, livers and spleens.

а

Supplementary Figure 2. Gating strategy for immunophenotyping. a, Conventional T cells were identified by CD3 expression on single, living, CD14-, CD19- lymphocytes. T cells were then subdivided in CD4+CD8-T helper cells and CD4- CD8+ cytotoxic T cells. Memory subsets were differentiated in T_n (CD45RA+ CCR7+), T_{cm} (CD45RA- CCR7+), T_{tm} (CD45RA- CCR7- CD27+), T_{em} (CD45RA- CCR7- CD27-) and T_{emRA} (CD45RA+ CCR7-). **b**, MAIT cells were defined as TCR Va7.2+ CD161+ T cells and γδ-T cells as TCRγδ+ CD4- CD8- T cells.γδ-T cells were subdivided in Vδ2+ and Vδ2- subsets. NK cells were defined as CD16+ and/or CD56+ non-T cells (CD3-).

Supplementary Figure 3. Gating strategy for intracellular cytokine staining.

T cells were identified by CD3 expression on single living lymphocytes. Cytokine expression and CD107a expression was assessed for CD4-CD8+ cytotoxic T cells after stimulation with CMV pp65 or HIV-1 peptide pools. No addition of peptides served as negative controls.

Supplementary Table 1. *Ex vivo* analysis of HIV-1-specific T-cells in an IFN-γ ELISpot assay.

Shown are Spot forming units (SFUs) per 200,000 freshly isolated PBMC in a 40 hours IFN-γ ELISpot assay.SFUs are given as mean of duplicates. n.d. = not done. SFU values considered as positive if > 5 SFU/200,000 PBMC. The mitogens PHA and ConA served as positive controls. Peptide sequences: amino acids in bold are contained in known T-cell epitopes. In addition to peptides corresponding to known HIV-1-specific T-cell epitopes, further peptides corresponding to HLA-A2-restricted epitopes derived from JC Virus, EBV and influenza were used.
