

Supplementary Material 2. Frequency of comorbidities based on the Mini International Neuropsychiatric Interview (M.I.N.I.).

Table S1

Frequency of comorbidities based on the Mini International Neuropsychiatric Interview (M.I.N.I.) in a subsample of $n = 159$ patients (93.5% of total BPD sample).

Any comorbidity	$n = 154$	96.9%
Any depressive disorder (lifetime)	$n = 147$	92.5%
Current depression	$n = 120$	75.5%
Lifetime manic or hypomanic episode	$n = 14$	8.8%
Posttraumatic stress disorder	$n = 24$	15.1%
Any anxiety disorder	$n = 14$	8.8%
Obsessive-compulsive disorder	$n = 2$	1.3%
Any alcohol-use disorder	$n = 41$	25.8%
Any substance-use disorder (non-alcohol)	$n = 29$	18.2%
Any eating disorder	$n = 3$	1.9%
Mean number of comorbidities ^a in addition to BPD diagnosis	$M = 2.5$	$SD = 1.2$

Note. ^a as categorized above.
