

Supplementary information, Video S1 Time-lapse analysis for pyroptosis of small intestinal organoids treated with cisplatin. Small intestinal organoids were treated with cisplatin (20 $\mu\text{g/mL}$) for 12 h. Propidium iodide (5 $\mu\text{g/mL}$, red) was used to indicate the occurrence of pyroptosis.

Supplementary information, Video S2 Time-lapse analysis for pyroptosis of small intestinal organoids treated with cisplatin and mannose. Small intestinal organoids were treated with cisplatin (20 $\mu\text{g/mL}$) and mannose (20 mM) for 12 h. Propidium iodide (5 $\mu\text{g/mL}$, red) was used to indicate the occurrence of pyroptosis.
