

Supplementary Figure S1 Original image of blots and gels in the article

Figure S1. The original blots were used in Figures 6C-D, please note the blots cut prior to hybridization with antibodies.

Figure S2. WGCNA for co-expression network construction of GSE20257. (A) Determination of soft-thresholding power for GSE20257. (B) Heatmap of the correlation between module eigengenes and the occurrence of COPD. (C) Black module of GSE20257 was intersected with the Cu metabolism-associated genes. Modules with different colors represent different gene modules, and the numbers in the modules represent the correlation between the module and the phenotype.
