GLUT1

The figure shows two Western blot panels. The left panel is labeled 'Ig G3' and the right panel is labeled 'Ig G4'. Both panels have 'c-Myc' written below them. Each panel contains three lanes of protein samples. In both panels, the top lane shows a prominent band at the top, and the bottom lane shows a band at approximately the same position as the top lane. The middle lane in each panel shows a faint band, indicating lower levels of c-Myc expression.

The figure consists of two panels. The left panel shows a single lane of a Western blot with a single band labeled 'LDHA'. The right panel shows a multi-lane Western blot with four lanes, also labeled 'LDHA'.
