Edited by W. T. A. Harrison, University of Aberdeen, Scotland

In the title molecular salt, $C_7H_7N_2^+ \cdot Br^-$, all the non-H atoms lie on crystallographic mirror planes. The packing consists of (010) cation–anion layers, with the cations forming dimeric units *via* very weak pairwise $C-H \cdots N$ interactions. Weak $C-H \cdots Br$ interactions link the cations to the anions.

Keywords: crystal structure; salt; 2-cyano-1-methylpyridinium bromide.**CCDC reference:** 1430625

Crystal structure of 2-cyano-1-methylpyridinium bromide

Vu D. Nguyen, Cameron A. McCormick, Robert A. Pascal, Joel T. Mague and Lynn V. Koplitz

S1. Comment

The cation in the title compound has crystallographically imposed mirror symmetry with the methyl H atoms slightly disordered about the mirror. The packing thus consists of cation/anion layers (Fig. 2) with the cations forming dimeric units *via* weak, pairwise C5—H5 $\cdots$ N2 interactions (Fig. 3 and Table 1). Within the layers weak C—H $\cdots$ Br interactions tie the cations and anions together (Fig. 3 and Table 1).

S2. Experimental

2-Cyanopyridine (4.04 g, 38.8 mmol) was first melted in a warm water bath and then dissolved in toluene (15 ml). Gaseous bromomethane was condensed (roughly 5 ml, 170 mmol) and added to this solution slowly. The reaction mixture was thoroughly mixed to yield a light amber homogenous solution and left to evaporate slowly. Light yellow shiny flakes of 2-cyano-1-methylpyridinium bromide (m.p. 196.4–197.4 C) were collected by vacuum filtration.

S3. Refinement

H-atoms attached to carbon were placed in calculated positions (C—H = 0.95 - 0.98 Å). All were included as riding contributions with isotropic displacement parameters 1.2 - 1.5 times those of the attached atoms. Trial refinements with the single-component reflection file extracted from the full dataset with *TWINABS* and with the full, 2-component reflection file indicated the former refinement to be superior.

$$\Delta\rho_{\min} = -0.44 \text{ e } \text{\AA}^{-3}$$

Special details

Experimental. The diffraction data were obtained from 3 sets of 400 frames, each of width 0.5° in ω , collected at $\varphi = 0.00, 90.00$ and 180.00° and 2 sets of 800 frames, each of width 0.45° in φ , collected at $\omega = -30.00$ and 210.00° . The scan time was 20 sec/frame. Analysis of 1897 reflections having $I/\sigma(I) > 13$ and chosen from the full data set with *CELL_NOW* (Sheldrick, 2008a) showed the crystal to belong to the monoclinic system and to be twinned by a 180° rotation about a^* . The raw data were processed using the multi-component version of *SAINT* under control of the two-component orientation file generated by *CELL_NOW*.

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger. H-atoms attached to carbon were placed in calculated positions ($C-H = 0.95 - 0.98 \text{ \AA}$). All were included as riding contributions with isotropic displacement parameters 1.2 - 1.5 times those of the attached atoms. Trial refinements with the single-component reflection file extracted from the full dataset with *TWINABS* and with the full, 2-component reflection file indicated the former refinement to be superior.
