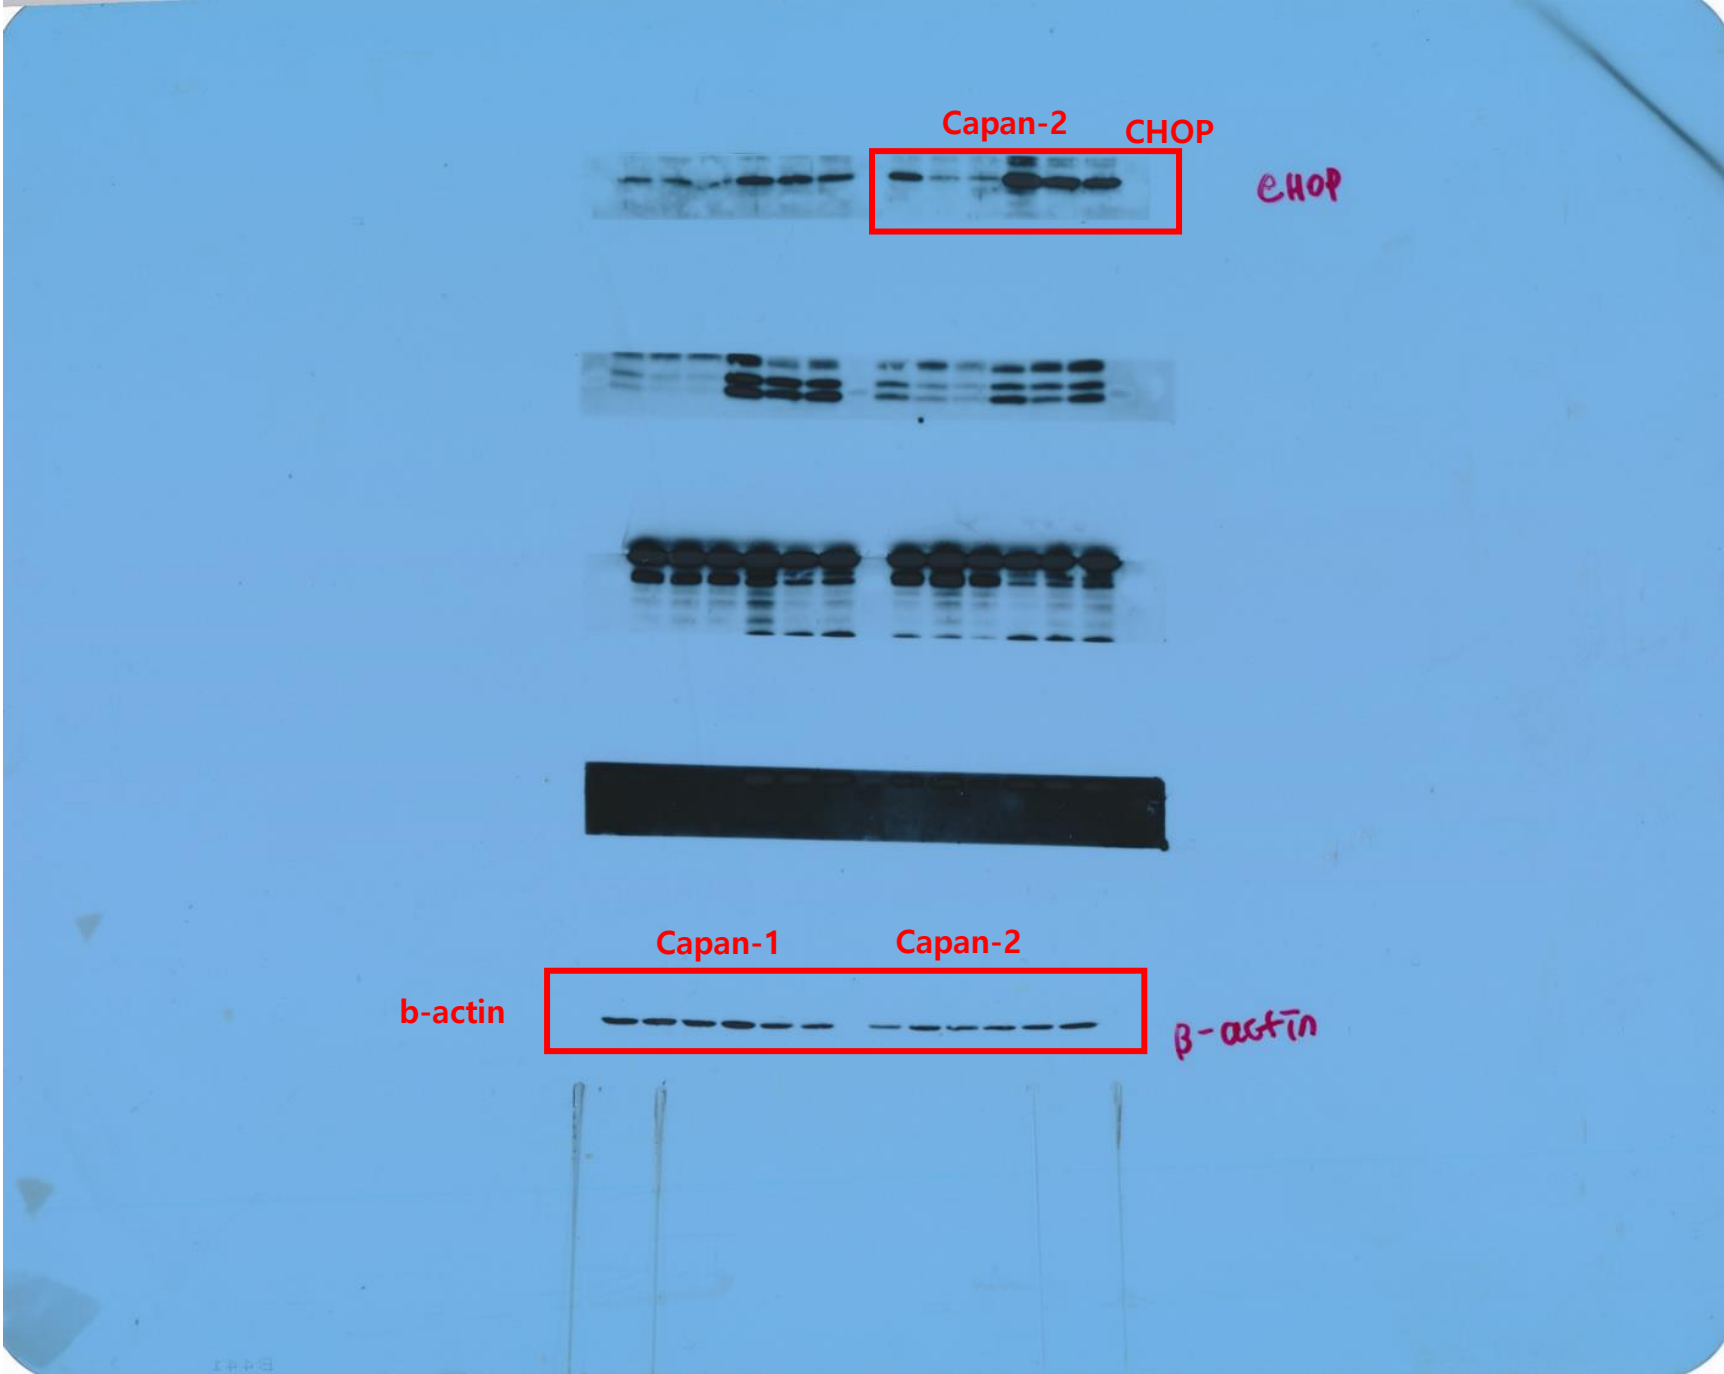

Figure 3C

Western blot analysis of p-SAPK/JNK in Capan-2 cells. The image shows two panels of blots. The left panel shows a single row of bands, while the right panel shows multiple rows of bands. A red box highlights a specific band in the right panel, labeled "Capan-2". The label "p-SAPK/JNK" is positioned to the left of the red box. The blots are stained with a dark color, likely DAB, and show varying intensities of bands across different lanes.
