

Degradable Starch Microspheres Transarterial Chemoembolization (DSM-TACE) in patients with unresectable Hepatocellular Carcinoma: Results from the Prospective Multicenter Observational HepaStar Trial.

ELECTRONIC SUPPLEMENTARY MATERIAL

Table 1 Liver function thresholds

Liver function thresholds to establish clinically meaningful deterioration after DSM-TACE.

Parameter	Deterioration threshold (change from baseline)
Serum total bilirubin	Increase of ≥ 50%
Serum albumin	Decrease by ≥ 0.3 g/dL
AST	Increase of > 25%
ALT	Increase of > 25%
