Correction to: Treatment of acute Achilles tendon rupture - a multicentre, non-inferiority analysis

Olof Westin^{1,2*}, Tony Sjögren¹, Simon Svedman³, Alexandra Horvath⁴, Eric Hamrin Senorski⁵, Kristian Samuelsson^{1,2} and Paul Ackermann^{3,6}

Correction to: BMC Musculoskelet Disord 21, 358 (2020) https://doi.org/10.1186/s12891-020-03320-3

Following publication of this article [1], the authors report the following Corrections to the main text:

- i) The authors noticed that the reported number of patients that were treated surgically were too many (n = 363) and have corrected the numbers (n = 337). Patients from the cohort Nilsson-Helander et al. [2] were incorrectly labeled as surgically treated when they had received non-surgical treatment. In view of this database mix up, the statistical analysis was re-performed with the correct database and the results changed accordingly.
- ii) With updated guidelines on how to perform non-inferiority studies having been published in the *New England Journal of Medicine* [3], since the original analysis was published, the statistical method have accordingly been changed to using Fisher's Non-parametric Permutation Test. The limb symmetry index for total work is inconclusive. The main conclusion, however, is unchanged that there is no significant difference between the surgery and non-surgery.
