

717 **Supplementary Figure 1.** Datasets included for transcriptomic analysis of *Gipr*^{EYFP+} and *Glp1r*^{EYFP+}
718 hypothalamic cells (A) Cell type labelling of UMAPs per dataset (from left to right: *Gipr*^{EYFP} female 1,
719 *Gipr*^{EYFP} female 2, *Gipr*^{EYFP} male, *Glp1r*^{EYFP} male). Violin plots of gene expression for marker genes per
720 cell type detected in each dataset. Gene expression is plotted in counts per million (CPM).

721 **Supplementary Figure 2:** Feature plots highlighting cells expressing *Glp1r*, *Gipr*, or *EYFP*. A-C. Cells
722 that express > 0 transcript counts for (A) *Gipr*, (B) *Glp1r*, (C) *EYFP* are highlighted in blue. D. UMAP
723 plot designating cell type clusters. (E) UMAP of the integrated dataset, overlaid with pie charts
724 representing size-adjusted proportion of *Gipr*^{EYFP} (red) and *Glp1r*^{EYFP} (teal) cells present in each cell
725 type, based on increasing the contribution from *Glp1r*^{EYFP} by more than 4-fold (= 11,351/2,740).

726 **Supplementary Figure 3.** Differential expression analysis of *Gipr*^{EYFP+} and *Glp1r*^{EYFP+} SMC and
727 endothelial cells. (A) Gene expression of *Xist* in vascular cluster Peri-7. (B) Gene expression of
728 differentially expressed (DE) genes between clusters of smooth muscle cells (SMCs), split by dataset
729 marker (*Gipr* or *Glp1r*). * = p-adj<0.05. (C) Gene expression of marker genes for venous (*Rgs5*, *Car4*),
730 arterial (*Cnn1*, *Tinagl1*) and arteriole SMCs (*Cd93*, *Nanos1*), split by dataset marker (*Gipr* or *Glp1r*). *
731 = p-adj<0.05. (D) UMAP of vascular cells, labelled for dataset. (E) Gene expression of marker genes
732 for venous (*Bmx*, *Vegfc*, *Gkn3*) and arterial endothelial cells (*Mfsd2a*, *lvns1abp*, *Slc16a1*), split by
733 dataset marker (*Gipr* or *Glp1r*). * = p-adj<0.05. Gene expression plotted in counts per million (CPM)
734 for all plots.

735 **Supplementary Figure 4.** Differential expression analysis of *Gipr*^{EYFP+} and *Glp1r*^{EYFP+} VLMC cells. (A)
736 Gene expression of differentially expressed (DE) genes between clusters of VLMCs, split by dataset
737 marker (*Gipr* or *Glp1r*). * = p-adj<0.05. Gene expression plotted in counts per million (CPM). (B)
738 UMAP of the VLMCs, overlaid with pie charts representing proportion of *Gipr*^{EYFP} (red) and *Glp1r*^{EYFP}
739 (teal) cells present in each cell type. (C) UMAP of oligodendrocytes, labelled for dataset marker (*Gipr*
740 or *Glp1r*).

741 **Supplementary Figure 5:** Regional markers used for neuronal cluster identification. Cluster-specific
742 markers were identified using negative binomial regression analysis (see Table 1), compared to
743 published brain region-specific transcriptional markers, and mapped to specific hypothalamic nuclei
744 using the Allan Brain Atlas. Feature plots show selected cluster marker expression are shown on left.

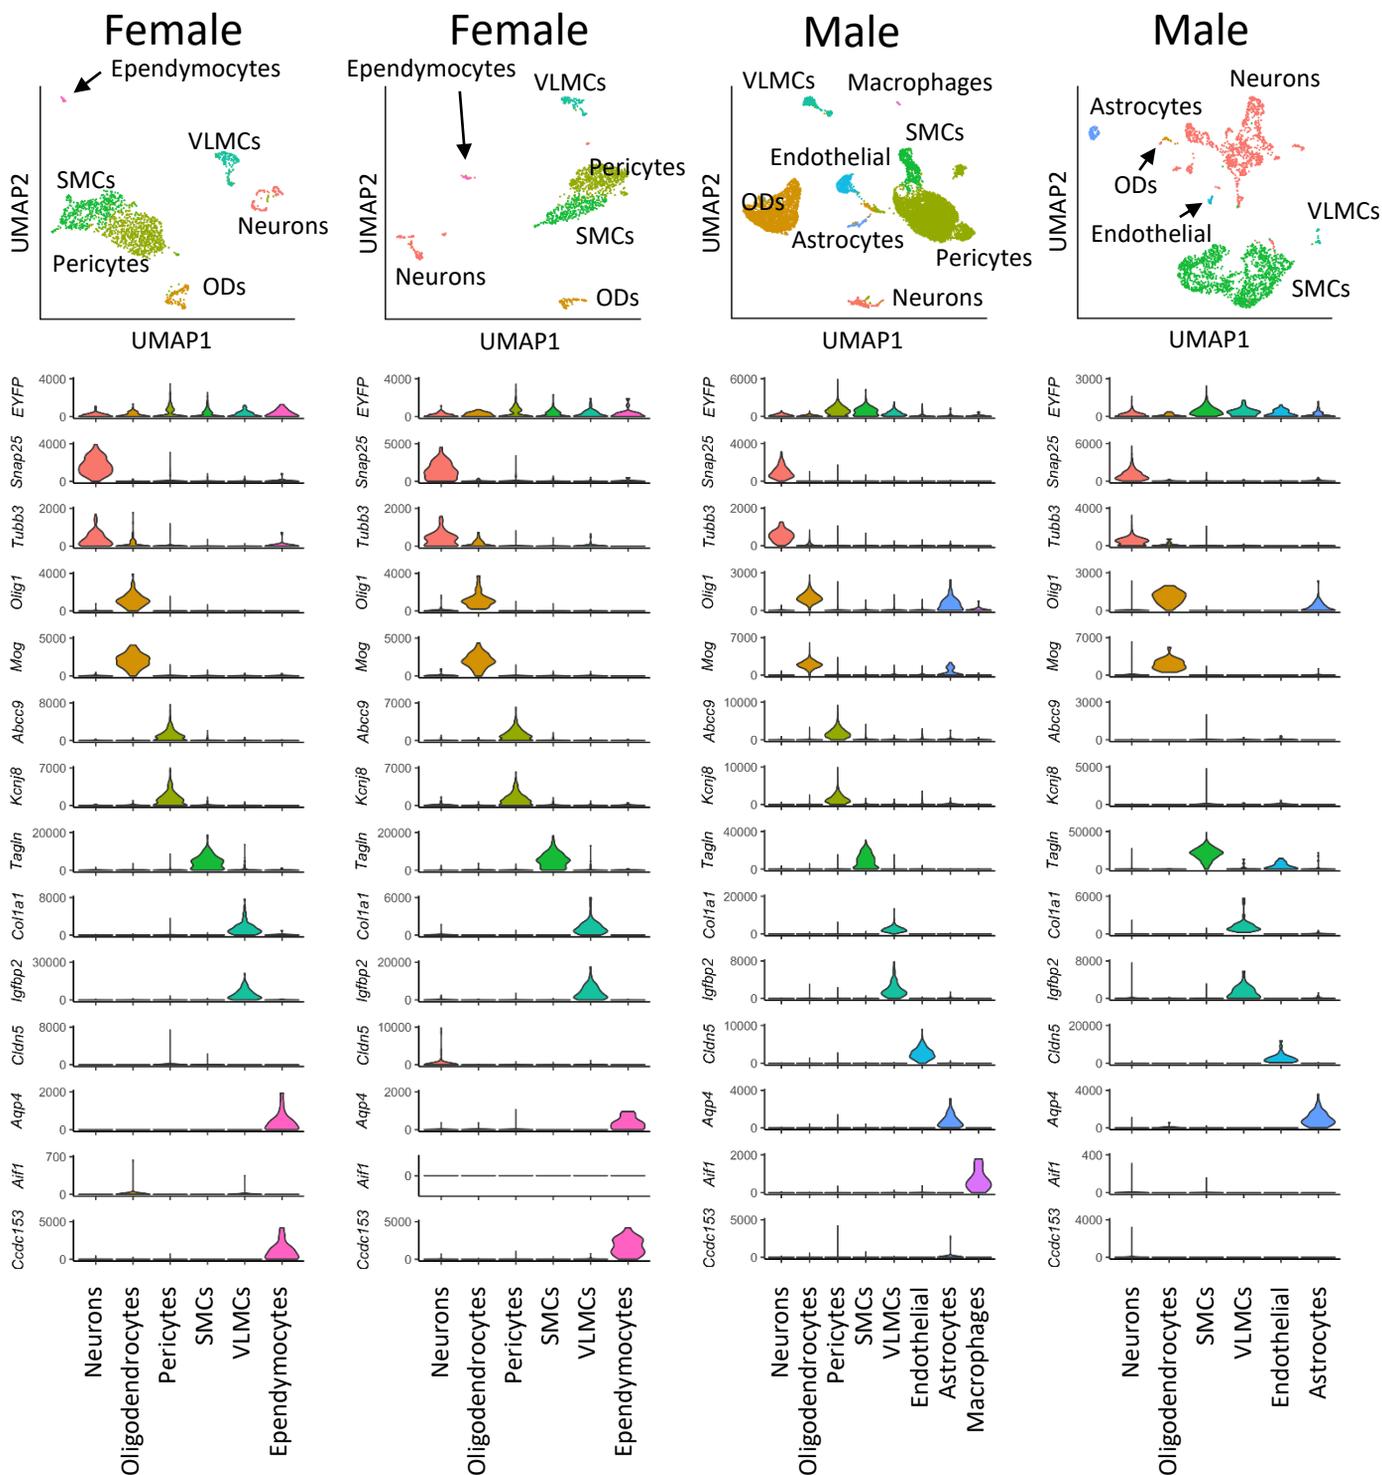

745 Data are expressed in CPM. Representative ISH images form the Allan Brain Atlas for each cluster are
746 shown on right.

747 **Supplementary Table 1:** Top 15 Neuronal cluster markers. Cluster markers were determined using
748 negative binomial regression analysis. The top 15 markers per neuronal cluster are listed.
