

Figure S1. BS1 within the *yqjC* leader is important for CsrA binding. CsrA-*yqjC* leader RNA binding assay with wild type (top) and mutant (bottom) RNA. The mutation in BS1 [A(-15)G] is 2 nt upstream of the GGA motif. 5'-end-labeled transcripts (0.1 nM) were incubated with indicated CsrA concentrations. Binding curves of CsrA-*yqjC* leader RNA interaction is shown.
