(Molecular Therapy: Oncolytics 31, 1–14; December 2023)

In the originally published version of this article, the association constant and dissociation constant were referred to as “ K_A and K_D ,” respectively, when in the accepted manuscript they were written as “ K_a and K_d .” This was an error introduced in Production, and Cell Press apologizes for any confusion this may have caused. However, the authors agree that they should have written these as “ k_a and k_d ” in the first place in accordance with agreed norms.

To clarify this sentence, the association constant and dissociation constant have been written as “ k_{on} and k_{off} .” This change has been reflected in the article online.
