Editorial

Editorial for January/February Issue of AACE Clinical Case Reports

Dear Colleagues,

Happy New Year and welcome to another issue of *AACE Clinical Case Reports* (ACCR). ACCR continues to grow in both manuscript submissions and readership; this growth would not have been possible without the dedication of our associate editors, editorial board members, and editorial/publication staff. Special thank you to our excellent reviewers that provided meaningful and constructive reviews to help the educational value of the published cases.

The current issue includes interesting and educational cases to share. We will provide a summary of some of those cases below. For more details, please access ACCR online journal available at <https://www.aaceclinicalcasereports.com/>.

Under the Pituitary-Gonadal-Adrenal Axis in this issue, a case highlighted the risks associated with inappropriate use of over the counter medications such as hydrocortisone cream.¹ In another case, authors suggested the co-occurrence of both functional gonadotroph adenoma with a lactotroph adenoma in patients who present with elevated gonadotropin levels despite hyperprolactinemia.²

We also have some interesting adrenal cases suggesting the occurrence of adrenal liposarcoma as part of Multiple Endocrine Neoplasia Type 1,³ presentation of Adrenal Corticomedullary Mixed Tumor⁴ and histopathologic differences between adrenocorticotrophic hormone dependent and adrenocorticotrophic hormone independent adrenal hyperplasia causing Cushing Syndrome,⁵ and primary adrenal insufficiency due to bilateral primary adrenal lymphoma (PAL).⁶

On Diabetes, Lipids, and Metabolism, we share the clinical presentation of a rare case of multiple acyl-coenzyme A dehydrogenase deficiency (MADD) in adults⁷ and a video showing involuntary movements during treatment for hyperglycemia.⁸

In the field of thyroid disease, there is an interesting and rare presentation of thyroid disease as Marine-Lenhart Syndrome.⁹

As always, I truly appreciate all contributing authors, reviewers, editors, and staff that help improve our journal and create an

educational platform to our readers to help best manage our patients. ACCR would particularly like to thank all the reviewers who contributed to reviewing cases during the past year.

Thank you again for your interest in ACCR. I welcome all feedback, questions, and comments from our readers. Please feel free to reach us at publications@aace.com.

I wish you all a great 2023!

Warmest regards,
