## GBD CVD disease definition

The GBD cause list is a hierarchical, mutually exclusive, and collectively exhaustive classification of causes of death. The three Level 1 GBD causes encompass communicable, maternal, neonatal, and nutritional disorders; non-communicable diseases; and injuries. Level 2 causes are divided into 21 groups, such as neoplasms and CVD. Levels 3 and 4 include more specific subcauses. The categorisation of CVD causes is presented in Table S1.

*Table S1 GBD CVD disease categorization*

<b>Cause Name</b>	<b>Parent Name</b>	<b>Level</b>
<b>Cardiovascular diseases</b>	Non-communicable diseases	2
<b>Rheumatic heart disease</b>	Cardiovascular diseases	3
<b>Lower extremity peripheral arterial disease</b>	Cardiovascular diseases	3
<b>Endocarditis</b>	Cardiovascular diseases	3
<b>Other cardiovascular and circulatory diseases</b>	Cardiovascular diseases	3
<b>Ischaemic heart disease</b>	Cardiovascular diseases	3
<b>Stroke</b>	Cardiovascular diseases	3
<b>Hypertensive heart disease</b>	Cardiovascular diseases	3
<b>Non-rheumatic valvular heart disease</b>	Cardiovascular diseases	3
<b>Cardiomyopathy and myocarditis</b>	Cardiovascular diseases	3
<b>Pulmonary arterial hypertension</b>	Cardiovascular diseases	3
<b>Atrial fibrillation and flutter</b>	Cardiovascular diseases	3
<b>Aortic aneurysm</b>	Cardiovascular diseases	3
<b>Ischaemic stroke</b>	Stroke	4
<b>Intracerebral haemorrhage</b>	Stroke	4
<b>Subarachnoid haemorrhage</b>	Stroke	4
<b>Non-rheumatic calcific aortic valve disease</b>	Non-rheumatic valvular heart disease	4
<b>Non-rheumatic degenerative mitral valve disease</b>	Non-rheumatic valvular heart disease	4
<b>Other non-rheumatic valve diseases</b>	Non-rheumatic valvular heart disease	4
<b>Myocarditis</b>	Cardiomyopathy and myocarditis	4
<b>Alcoholic cardiomyopathy</b>	Cardiomyopathy and myocarditis	4
<b>Other cardiomyopathy</b>	Cardiomyopathy and myocarditis	4

## ICD mapping for CVD causes

Table S4 ICD-9 and ICD-10 codes mapping for CVD causes

Causes	ICD-10	ICD-9
<b>Cardiovascular diseases</b>	B33.2, G45-G46.8, I01-I01.9, I02.0, I05-I09.9, I11-I11.9, I20-I25.9, I27.0, I27.2, I28-I28.9, I30-I31.1, I31.8-I37.8, I38-I41.9, I42.1-I42.8, I43-I43.9, I47-I48.9, I51.0-I51.4, I60-I63.9, I65-I66.9, I67.0-I67.3, I67.5-I67.6, I68.0-I68.2, I69.0-I69.3, I70.2-I70.8, I71-I73.9, I77-I83.9, I86-I89.0, I89.9, I98, K75.1	391-391.9, 392.0, 393-398.9, 402-402.9, 410-414.9, 416.0, 417-417.9, 420-423, 423.1-423.9, 424.0-424.3, 424.8, 425.0-425.5, 425.7-425.8, 427.0-427.3, 427.6-427.8, 429.0, 430-435.9, 437.0-437.2, 437.5-437.8, 440.2, 440.4, 441-443.9, 447-454.9, 456, 456.3-457, 457.1, 457.8-457.9, 459, 459.1-459.3
<b>Rheumatic heart disease</b>	I01-I01.9, I02.0, I05-I09.9	391-391.9, 392.0, 393-398.9
<b>Ischaemic heart disease</b>	I20-I25.9	410-414.9
<b>Stroke</b>	G45-G46.8, I60-I63.9, I65-I66.9, I67.0-I67.3, I67.5-I67.6, I68.1-I68.2, I69.0-I69.3	430-435.9, 437.0-437.2, 437.5-437.8
<b>Ischaemic stroke</b>	G45-G46.8, I63-I63.9, I65-I66.9, I67.2-I67.3, I67.5-I67.6, I69.3	433-435.9, 437.0-437.1, 437.5-437.8
<b>Intracerebral haemorrhage</b>	I61-I62, I62.1-I62.9, I68.1-I68.2, I69.1-I69.2	431-432.9, 437.2
<b>Subarachnoid haemorrhage</b>	I60-I60.9, I62.0, I67.0-I67.1, I69.0	430-430.9
<b>Hypertensive heart disease</b>	I11-I11.9	402-402.9
<b>Non-rheumatic valvular heart disease</b>	I34-I37.8	424.0-424.3, 424.8
<b>Non-rheumatic calcific aortic valve disease</b>	I35-I35.9	424.1
<b>Non-rheumatic degenerative mitral valve disease</b>	I34-I34.9	424.0
<b>Other non-rheumatic valve diseases</b>	I36-I37.8	424.2-424.3, 424.8
<b>Cardiomyopathy and myocarditis</b>	B33.2, I40-I41.9, I42.1-I42.8, I43-I43.9, I51.4	422-422.9, 425.0-425.5, 425.7-425.8, 429.0
<b>Myocarditis</b>	B33.2, I40-I41.9, I51.4	422-422.9
<b>Alcoholic cardiomyopathy</b>	I42.6	425.5
<b>Other cardiomyopathy</b>	I42.1-I42.5, I42.7-I42.8, I43-I43.9	425.0-425.4, 425.7-425.8, 429.0
<b>Pulmonary arterial hypertension</b>	I27.0	416.0
<b>Atrial fibrillation and flutter</b>	I48-I48.9	427.3
<b>Aortic aneurysm</b>	I71-I71.9	441-441.9
<b>Lower extremity peripheral arterial disease</b>	I70.2-I70.8, I73-I73.9	440.2, 440.4, 443.0-443.9
<b>Endocarditis</b>	I33-I33.9, I38-I39.9	421-421.9
<b>Other cardiovascular and circulatory diseases</b>	I27.2, I28-I28.9, I30-I31.1, I31.8-I32.8, I47-I47.9, I51.0-I51.3, I68.0, I72-I72.9, I77-I83.9, I86-I89.0, I89.9, I98, K75.1	417-417.9, 420-420.9, 423, 423.1-423.9, 427.0-427.2, 427.6-427.8, 442-443, 447-454.9, 456, 456.3-457, 457.1, 457.8-457.9, 459, 459.1-459.3

## Statistical methods

### Garbage codes redistribution

Garbage codes redistribution was applied to several non-fatal, undefined, or intermediate causes such as cardiac arrest, heart failure, and hypertension using appropriate methods. For instance, deaths coded as heart failure were redistributed using a regression model that accounted for the variability in how these codes were used based on age, sex, and location. Deaths from unspecified types of strokes (ICD-10 I64) were distributed based on the ratio of ischaemic, intracerebral, and subarachnoid events within a country's corresponding GBD region. For regions with limited primary mortality data, the global ratio stratified by age was used. Details of garbage code redistribution can be found in previous publications.<sup>1,2</sup>

### Cause of Death Ensemble model (CODEm)

CODEm generates cause-specific mortality estimates through a weighted combination of multiple individual predictive models. These individual predictive models, based on linear mixed-effects models and spatiotemporal Gaussian process regression, were developed using log- or logit-transformed dependent variables with cause-relevant covariates. These models were then ranked by predictive validity and combined accordingly. The final model combination was selected based on out-of-sample predictive error. Further details can be found in previous publications.<sup>2</sup>

### Disease model—Bayesian meta-regression (DisMod-MR) 2.1

DisMod-MR 2.1 utilises Bayesian meta-regression techniques to integrate epidemiological data from multiple sources. Mixed-effects models were applied to estimate levels and trends while accounting for heterogeneity across data sources and populations. A built-in compartmental model structure ensures coherence among metrics, transitions between different disease states (e.g., incidence, remission, and mortality). The modelling process allows for incorporation of different priors. These included hierarchical priors to account for geographical structure, informative priors to integrate expert knowledge on disease levels and variability, and age-specific priors to capture age-related patterns in certain conditions. Each cause was modelled separately, with all metrics estimates stratified by age, sex, location, and year. Model development involved an iterative process, where the final specification was selected based on cross-validation results, assessing various goodness-of-fit, error statistics, as well as face validity of conclusion.<sup>3</sup>

### Data gaps and interpolation strategies

To address data gaps and generate complete time series for each metric by age, sex, year and location, three key mechanisms were employed in the disease modelling process: (1) the incorporation of covariates, (2) the integration of spatiotemporal

relationships, and (3) the implementation of a compartmental model framework (for DisMod-MR 2.1). With respect to covariates, variables with well-established associations with the outcome metrics of interest were utilised across different stages of analysis. These variables included the Healthcare Access and Quality (HAQ) Index,<sup>4</sup> Socio-demographic Index (SDI),<sup>5</sup> systolic blood pressure, smoking prevalence, and body-mass index (BMI). Moreover, as a part of the broader GBD 2021 study, this analysis leveraged the GBD geographical hierarchical structure that accounts for geographical proximity and epidemiological similarities. Temporal associations were incorporated in the model specifications to capture changes over time. The compartmental model embedded in DisMod-MR 2.1 facilitated interpolations of data by enforcing a coherent mathematical structure. Further details on the estimation process can be found in previous publications.<sup>2,3,6</sup>

## GATHER checklist

Item #	Checklist item	Reported location
<b>Objectives and funding</b>		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	Main text methods overview, paragraph 1
2	List the funding sources for the work.	Main text method section "role of the funding source"
<b>Data Inputs</b>		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	Main text methods section paragraph 1
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	Inclusion criteria summarized in methods section "Data sources"
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	Table S2 "Causes of death data sources for ASEAN countries" and table S4 "Non-fatal data sources for ASEAN countries"; citations also given on the GHDx ( <a href="https://ghdx.healthdata.org/">https://ghdx.healthdata.org/</a> )
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	Data inputs in excel format available on the GHDx ( <a href="https://ghdx.healthdata.org/">https://ghdx.healthdata.org/</a> )
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	N/A
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or the name of the institution that retains the right to the data.	Data inputs in excel format available on the GHDx ( <a href="https://ghdx.healthdata.org/">https://ghdx.healthdata.org/</a> )
<b>Data analysis</b>		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	Main text methods overview
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	Main text methods section with references to previous publications
11	Describe how candidate models were evaluated and how the final model(s) were selected.	Main text methods section with references to previous publications
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	N/A
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	Main text methods section paragraph 9

14	State how analytic or statistical source code used to generate estimates can be accessed.	N/A
<b>Results and Discussion</b>		
15	Provide published estimates in a file format from which data can be efficiently extracted.	The results can be efficiently extracted at <a href="https://vizhub.healthdata.org/gbd-results/">https://vizhub.healthdata.org/gbd-results/</a>
16	Report a quantitative measure of the uncertainty of the estimates (e.g. uncertainty intervals).	UIs given for all findings, including in the text, figures, and tables in the main text and appendix; online viz tools (see information above)
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	Main text discussion paragraphs 1-8
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	Main text discussion, limitations subsection

## Supplementary results

Table S5: Number of prevalence cases of CVD causes in ASEAN and its member countries, 2021.

	Association of Southeast Asian Nations	Indonesia	Thailand	Viet Nam	Philippines	Myanmar	Malaysia	Cambodia	Singapore	Laos	Brunei
Cardiovascular diseases	36 779 815 (34 356 620 - 38 839 323)	14 476 458 (13 434 077 - 15 485 854)	5 719 760 (5 381 062 - 6 032 125)	5 307 546 (5 011 599 - 5 594 693)	4 866 014 (4 486 559 - 5 181 747)	2 897 870 (2 706 131 - 3 059 815)	2 099 438 (1 978 746 - 2 219 409)	708 146 (660 346 - 750 953)	385 549 (365 299 - 405 546)	301 527 (279 559 - 322 080)	17 508 (16 494 - 18 577)
Atrial fibrillation and flutter	3 749 544 (2 972 212 - 4 922 042)	1 474 160 (1 152 713 - 1 922 564)	661 374 (516 881 - 864 805)	581 496 (457 784 - 771 131)	466 916 (369 507 - 610 795)	267 795 (211 909 - 352 206)	174 176 (137 798 - 228 296)	61 483 (48 621 - 81 182)	36 795 (28 982 - 47 620)	23 869 (18 913 - 31 406)	1 479 (1 155 - 1 910)

Table S19: Percentage change of age-standardised DALY rates (per 100 000 population) of cardiovascular risk factors from 1990 to 2021

	Association of Southeast Asian Nations	Brunei	Cambodia	Indonesia	Laos	Malaysia	Myanmar	Philippines	Singapore	Thailand	Viet Nam
Air pollution	-47.4 (-57.8 to -35.3)	-52.7 (-90.5 to 366.7)	-31.5 (-46.3 to 15.0)	-42.5 (-58.8 to 22.4)	-46.3 (-62.8 to -27.6)	-53.9 (-73.5 to 4.1)	-46.5 (-60.3 to 28.4)	-28.9 (-46.1 to 11.5)	-85.3 (-93.2 to 59.9)	-63.7 (-73.4 to 51.1)	-47.3 (-62.6 to 29.5)
Alcohol use	165.4 (-674.0 to 1148.9)	-65.4 (-82.3 to 33.3)	252.2 (-685.1 to 1081.7)	-13.1 (-83.0 to 50.9)	11.2 (-300.7 to 286.2)	-75.3 (-234.5 to 65.0)	520.2 (-3488.8 to 3181.3)	52.7 (-300.5 to 504.6)	-206.5 (-302.1 to 138.3)	-19.7 (-48.7 to 42.7)	2787.1 (-8022.7 to 23887.4)
Dietary risks	-34.5 (-53.9 to -22.2)	-43.8 (-55.3 to 31.7)	-35.9 (-53.6 to 16.9)	-18.5 (-50.1 to 4.9)	-58.5 (-77.3 to -41.5)	-39.8 (-66.0 to 32.0)	-56.4 (-70.4 to 38.9)	-16.3 (-31.8 to 1.1)	-73.8 (-76.1 to 69.9)	-52.8 (-70.0 to 36.6)	-40.2 (-58.6 -19.6)
High body-mass index	64.0 (24.5 - 103.4)	7.7 (-16.7 to 33.2)	15.9 (-22.0 to 74.2)	112.4 (46.4 to 199.5)	16.6 (-24.9 to 90.7)	20.1 (1.5 to 38.1)	-11.2 (-39.7 to 33.8)	64.0 (31.9 to 100.0)	-34.7 (-43.4 to 26.2)	63.4 (14.5 to 125.0)	81.9 (4.0 - 190.6)
High fasting plasma glucose	15.1 (2.0 - 31.3)	-39.4 (-48.6 to 27.8)	31.6 (0.3 to 65.8)	70.5 (36.7 to 114.9)	-18.6 (-38.4 to 5.7)	-5.6 (-14.3 to 3.7)	-18.1 (-36.5 to 7.4)	5.5 (-8.8 to 23.2)	-73.9 (-76.0 to 71.8)	-24.5 (-40.1 to 4.8)	24.7 (-2.1 to 63.5)
High LDL cholesterol	-6.0 (-15.7 to 5.7)	-43.2 (-51.7 to 33.4)	-17.2 (-36.1 to 7.0)	22.6 (0.6 to 50.1)	-38.2 (-52.9 to -15.3)	-16.9 (-22.5 to 9.6)	-37.7 (-53.3 to 18.3)	-1.1 (-16.8 to 15.8)	-74.5 (-75.9 to 73.0)	-34.8 (-48.5 to 18.8)	7.4 (-16.3 to 37.2)
High systolic blood pressure	-11.0 (-21.5 to 2.3)	-51.0 (-58.9 to 40.7)	-27.7 (-45.4 to 6.4)	10.0 (-9.7 to 32.7)	-36.8 (-52.9 to -16.2)	-18.2 (-24.0 to 12.2)	-36.3 (-50.8 to 15.1)	-4.7 (-20.3 to 13.3)	-79.3 (-82.1 to 76.5)	-34.1 (-48.4 to 16.6)	-1.8 (-24.8 to 24.9)
Kidney dysfunction	-12.7 (-22.8 to -2.2)	-49.2 (-56.1 to 40.6)	-21.9 (-38.3 to 2.1)	11.6 (-8.6 to 34.0)	-38.0 (-52.3 to -18.2)	-25.7 (-30.9 to 20.3)	-39.5 (-53.9 to 19.1)	-3.9 (-17.6 to 12.1)	-75.4 (-77.7 to 73.5)	-36.2 (-48.9 to 20.6)	-11.2 (-31.2 to 13.5)
Low physical activity	6.3 (-15.2 to 32.0)	-49.3 (-65.6 to 26.2)	-12.3 (-54.3 to 52.0)	24.7 (-6.6 to 61.4)	-36.2 (-63.6 to -0.4)	-12.5 (-38.4 to 25.4)	-29.0 (-60.8 to 14.4)	0.7 (-34.2 to 49.9)	-77.4 (-84.0 to 66.8)	-39.3 (-59.3 to 4.9)	13.0 (-29.5 to 91.4)
Non-optimal temperature	-6.5 (-22.7 to 29.0)	-44.5 (-62.4 to 20.6)	19.8 (-158.3 to 167.5)	3.6 (-23.5 to 69.7)	-24.5 (-43.7 to 4.8)	-5.1 (-19.1 to 53.1)	-35.0 (-50.7 to 7.6)	114.9 (-1296.8 to 582.7)	-55.3 (-78.1 to 5.6)	11.2 (-29.6 to 85.5)	16.4 (-11.9 to 66.5)
Other environmental risks	-21.9 (-32.4 to -8.0)	-56.8 (-63.9 to 47.9)	-15.7 (-35.2 to 10.1)	-8.5 (-26.7 to 11.7)	-37.0 (-52.5 to -15.1)	-28.8 (-34.7 to 21.0)	-38.2 (-53.4 to 16.5)	9.6 (-8.7 to 31.7)	-74.6 (-78.9 to 71.5)	-38.1 (-52.0 to 21.9)	-17.4 (-36.9 to 9.0)
Tobacco	-22.5 (-32.3 to -10.7)	-63.1 (-70.2 to 54.6)	-22.7 (-41.3 to 0.4)	12.1 (-10.4 to 39.4)	-40.5 (-55.2 to -21.0)	-36.7 (-42.8 to 29.6)	-63.4 (-73.6 to 50.1)	-25.4 (-39.5 to 7.8)	-78.8 (-81.2 to 76.2)	-48.1 (-60.1 to 33.9)	-16.6 (-37.5 to 11.6)

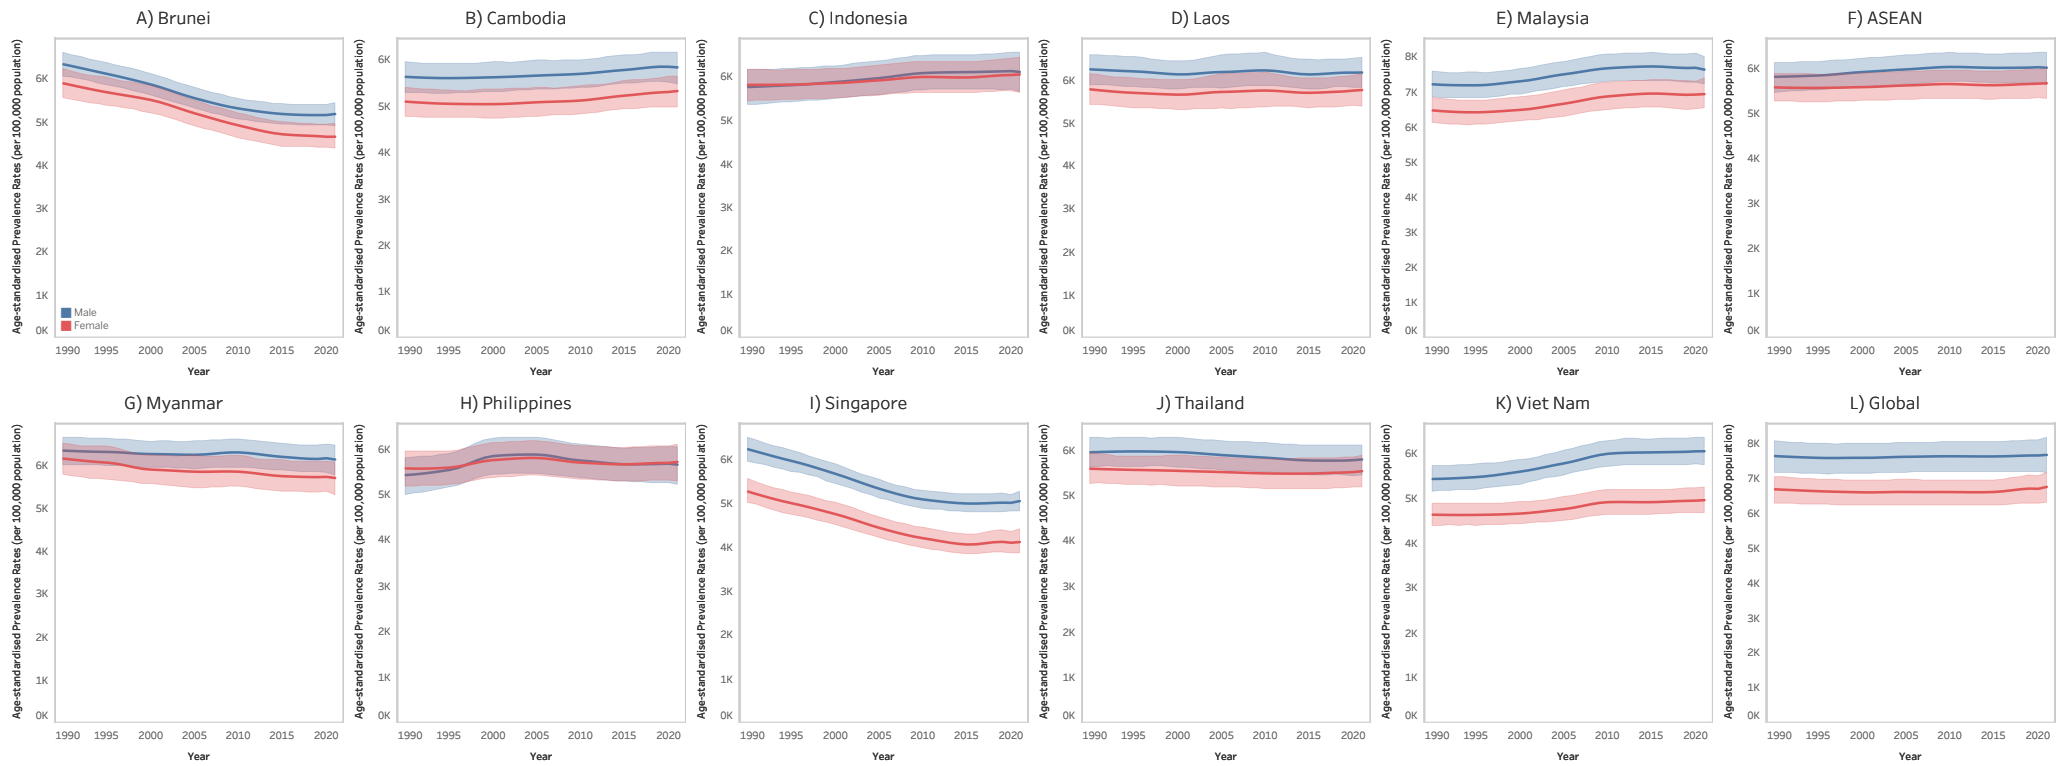

Figure S1: Trends in age-standardised prevalence rates (per 100 000 population) from 1990 to 2021 across global, ASEAN and ASEAN countries by sex

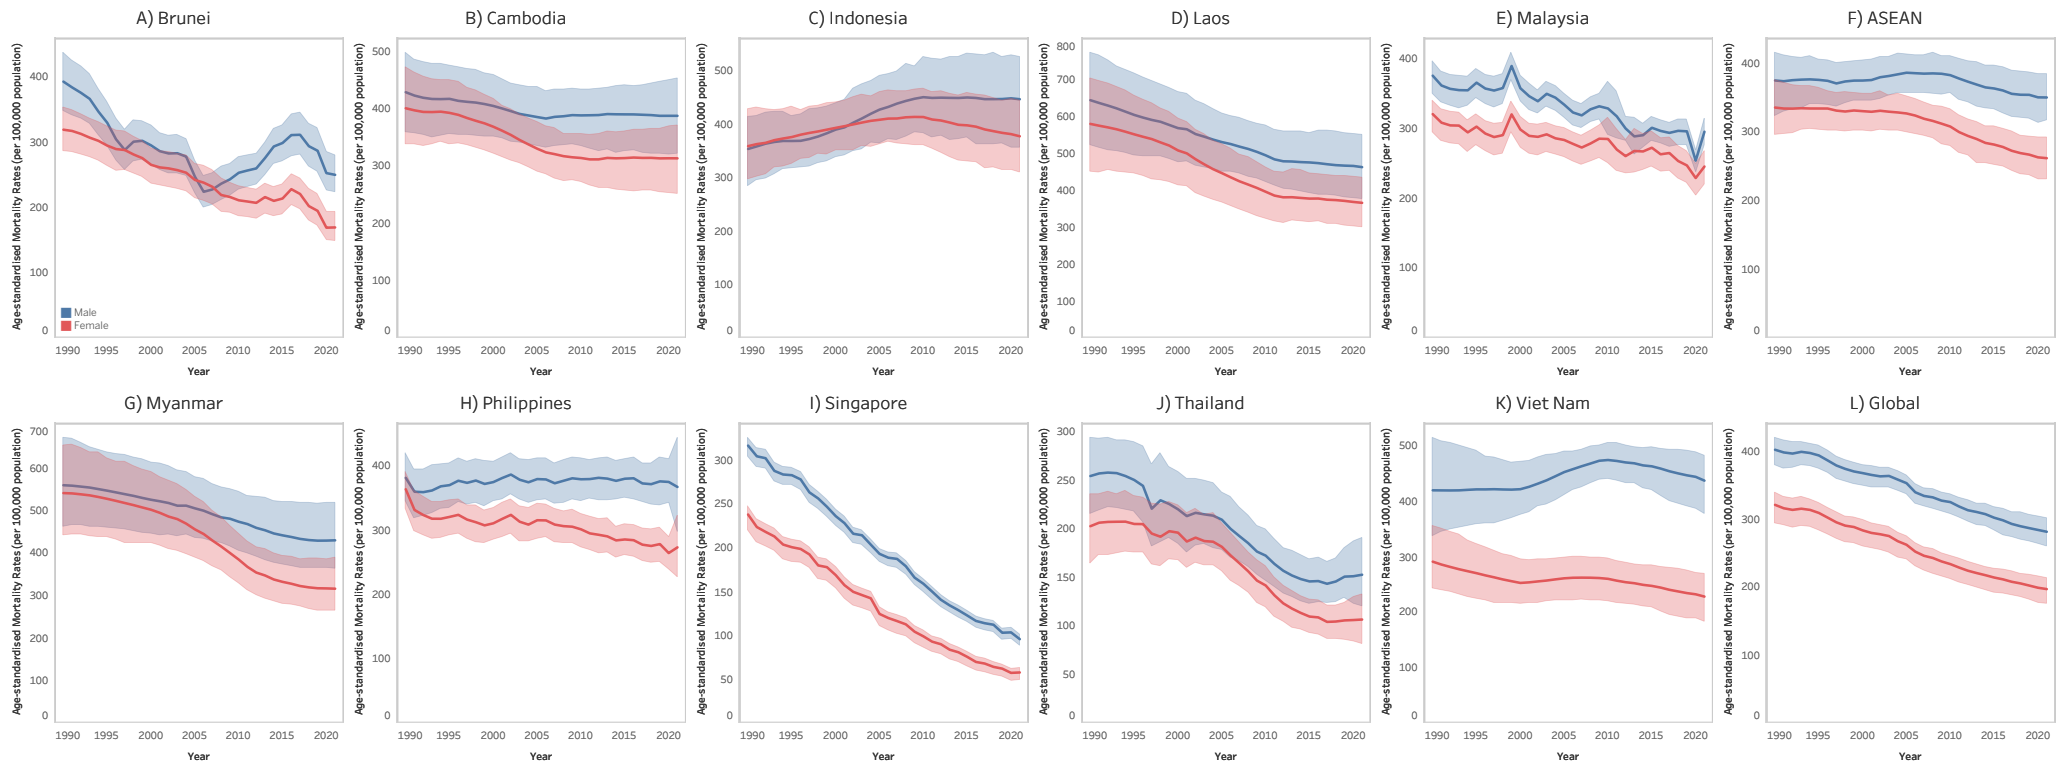

Figure S2: Trends in age-standardised mortality rates (per 100 000 population) from 1990 to 2021 across global, ASEAN and ASEAN countries by sex

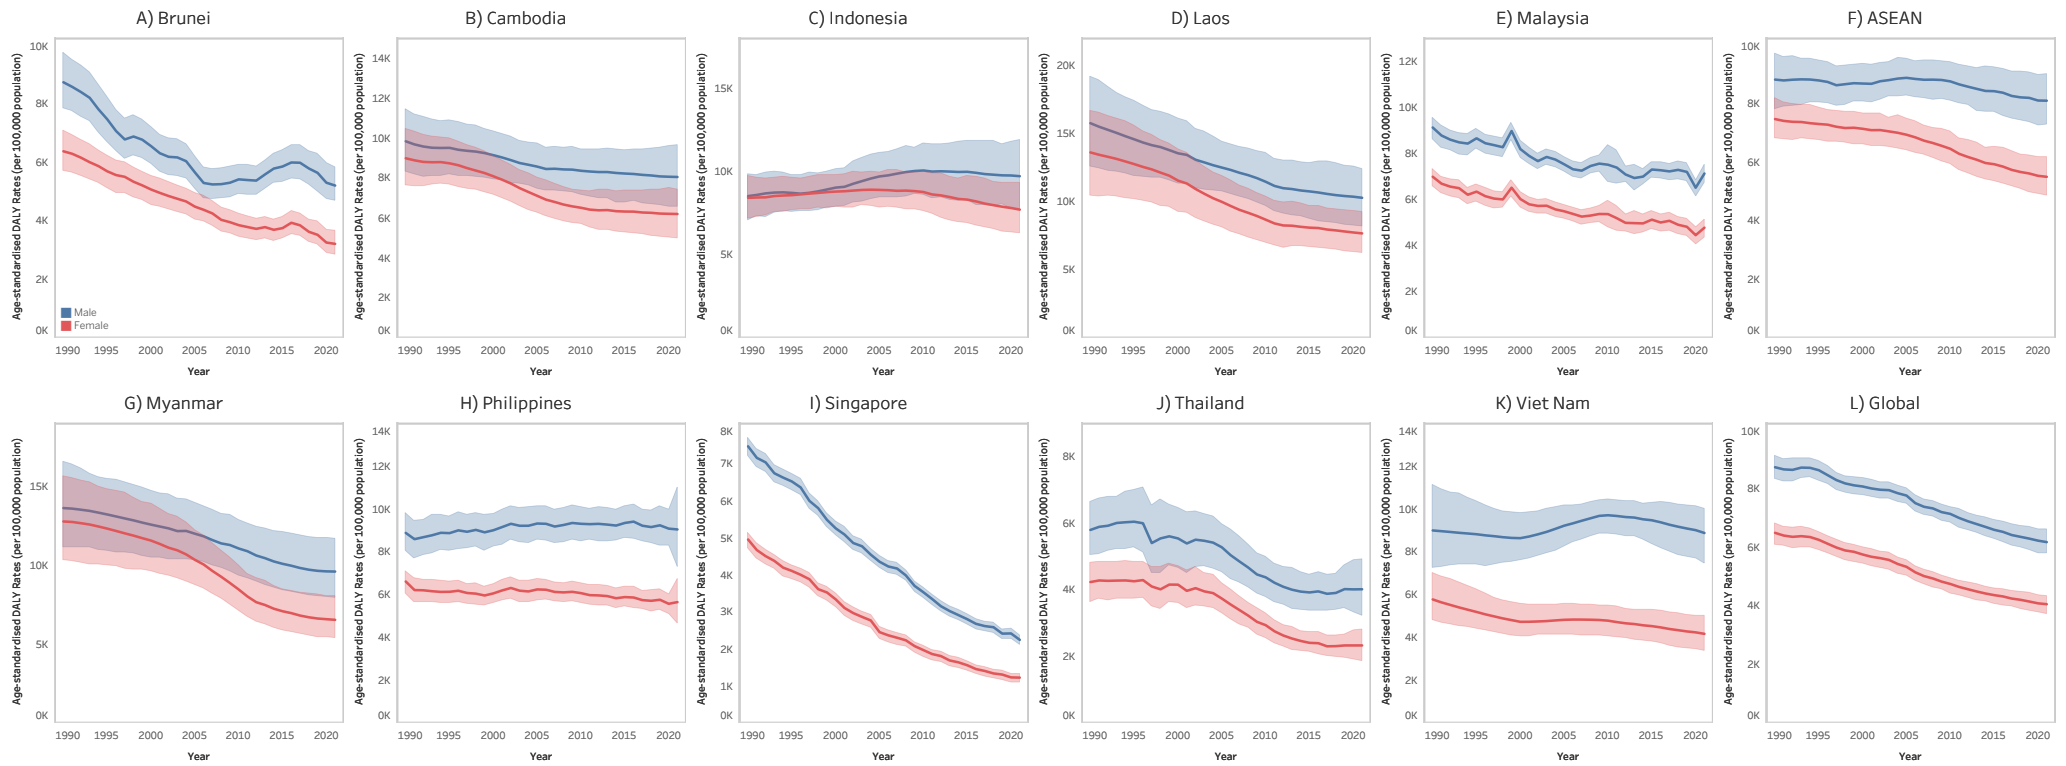

Figure S3: Trends in age-standardised DALY rates (per 100 000 population) from 1990 to 2021 across global, ASEAN and ASEAN countries by sex

Figure S4: Age-distribution of number of CVD (A) prevalence cases, (B) number of mortality, (C) number of DALYs across ASEAN

Figure S5: Ranking of cardiovascular diseases causes based on age-standardised prevalence rates (per 100 000 population) from 1990 to 2021 by global, ASEAN and ASEAN countries

A) Percentage Change in Age-Standardised Mortality Rates (per 100 000 population) of Cardiovascular Risk Factors from 1990 to 2021

B) Percentage Change in Age-Standardised DALY Rates (per 100 000 population) of Cardiovascular Risk Factors from 1990 to 2021

Figure S6: Percentage change in (A) age-standardised mortality rates and (B) age-standardised DALY rates (per 100,000 population) of CVD risk factors from 1990 to 2021 by global, ASEAN and ASEAN countries
