The number of live-born singletons in Norway was presented incorrectly in Figure 1. The correct number is 412,807. This means that the total number of live-born singletons in the study period was 3,130,848 and the number

of children unexposed to pivmecillinam and nitrofurantoin was 2,808,757. The error did not affect the included study sample, or any other results.
