

**CORRIGENDUM****Corrigendum**

In the article by Yoshioka-Maeda and Fujii (2020), the author found mistakes in Table 3, which are corrected in this version. In Table 3, the data under the headings Estimate, SE and 95% CI in rows one and two were reversed. The data under the heading n were reversed in rows three and four and in rows five and six. The corrected Table 3 appears below.

**TABLE 3** Length of the care period needed to resolve the primary health issue in each household (N = 43)

	Average				
	n	Estimate	SE	95% CI	p
A single-person household <65 years old	11	159.5	33.0	(94.86–224.23)	.339
Reference = 0	32	192.3	21.0	(151.18–233.32)	
A single-person household ≥65 years old	6	110.2	31.6	(48.32–172.01)	.029**
Reference = 0	37	195.8	19.3	(158.00–233.68)	
Elderly person with a singlehood child	10	220.7	46.2	(130.07–11.33)	.151
Reference = 0	33	172.7	18.3	(136.83–208.62)	
Total	43	183.9	17.7	(149.24–218.53)	–

Note: Log-rank test.

95%CI, 95% confidence interval.

\*\*p < .05 Log-rank test.

We apologize for these errors.
