The authors regret that the cell image for the *EFG1* mutant strain in Fig. 6-A was inadvertently switched for a different image. Therefore, the mistaken image was replaced with a correct image of the *EFG1* single deletion strain. The ratio of different cell forms was collected from 3 different experiments. The replacement will

not change any result or conclusion in this paper. The new image comes from the previous original data of this research

Below are the old and new images with the change highlighted. The authors would like to apologise for any inconvenience caused.
