# Correction to: The relationship between comorbidity medication adherence and health related quality of life among patients with cancer

Dana Drzayich Antol<sup>1\*</sup>, Adrienne Waldman Casebeer<sup>1</sup>, Raya Khoury<sup>2</sup>, Todd Michael<sup>2</sup>, Andrew Renda<sup>3</sup>, Sari Hopson<sup>1</sup>, Aparna Parikh<sup>2</sup>, Alisha Stein<sup>1</sup>, Mary Costantino<sup>1</sup>, Stephen Stemkowski<sup>1</sup> and Mikele Bunce<sup>2</sup>

**Correction to: J Patient-Rep Outcomes 2, 29 (2018)**  
<https://doi.org/10.1186/s41687-018-0057-2>

Following publication of the original article [1], some errors were identified in relation to the Morisky Medication Adherence Scale (MMAS-8).

- The legend related to Table 1 should read:

Morisky Medication Adherence Score < 6 was defined as low comorbidity medication adherence.

Morisky Medication Adherence Score = 6–8 was defined as moderate/high medication adherence.

Differences were assessed using a t-test for continuous variables and a chi-square test for categorical variables.

-The legend related to Fig. 2 should read:

Morisky Medication Adherence Score < 6 was defined as low comorbidity medication adherence.

Morisky Medication Adherence Score = 6–8 was defined as moderate/high medication adherence.

Differences were assessed using a t-test for continuous variables and a chi-square test for categorical variables.

-In the reference section, one additional reference should be added after reference 24: Morisky DE, DiMatteo MR. Improving the measurement of self-reported medication nonadherence: Final response. *J Clin Epidemiol* 2011; 64: 258–263. PMID:21144706.

The authors regret any error regarding the Morisky Medication Adherence Scale in the original publication.
